1 Inleiding

Om het effect van de windturbine op vlak van slagschaduw te bepalen, wordt een slagschaduwmodellering uitgevoerd conform de voorwaarden opgenomen in het addendum R20.1.6.

Voorliggende slagschaduwstudie omvat een beschrijving van de te verwachten slagschaduweffecten van het windenergieproject op de site van Stukwerkers in het Kluizendok. Gezien nog niet geweten is of dat vergunde windturbine KLZ-WT19 zal worden gerealiseerd en bijhorend KLZ-WT11 zal worden afgebroken is er sprake van twee referentiesituaties A en B. Daarnaast zijn er nog twee windturbines (KLZ-WT21 en KLZ-WT22) in de omgeving in ontwikkeling die mogelijks zouden worden vergund en gerealiseerd, deze vormen het onderwerp van geplande situatie 2:

- Het **project**: de geplande windturbine KLZ-WT23
- **Referentiesituatie A:** relevante[1] bestaande, vergunde windturbines in de omgeving van het project (**incl**. KLZ-WT19 en **excl**. KLZ-WT11). In deze situatie wordt KLZ-WT19 gebouwd en KLZ-WT11 afgebroken;
- **Referentiesituatie B:** relevante bestaande, vergunde windturbines in de omgeving van het project (**excl**. KLZ-WT19 en **incl**.KLZ-WT11). In deze situatie wordt KLZ-WT19 niet gebouwd en KLZ-WT11 niet afgebroken;
- De **geplande situatie 1A:** cumulatief effect van referentiesituatie A met het project;
- De **geplande situatie 1B:** cumulatief effect van referentiesituatie B met het project;
- De **geplande situatie 2A:** cumulatief effect van referentiesituatie A met het project en de relevante windturbines in ontwikkeling;
- De **geplande situatie 2B:** cumulatief effect van referentiesituatie B met het project en de relevante windturbines in ontwikkeling;

In deze studie wordt gebruik gemaakt van verschillende benamingen om punten in de omgeving van de windturbine aan te duiden. ‘Slagschaduwgevoelige objecten’ verwijst naar alle gebouwen waarin gewoond of gewerkt wordt binnen de 0-uur slagschaduwcontour van een bepaald scenario. Bij deze gebouwen is de aanwezigheid slagschaduw dus mogelijk. ‘Receptoren’ verwijst op zijn beurt naar een selectie van gebouwen waarvoor er in deze studie berekeningen/modelleringen gemaakt zijn. Er zijn bijgevolg meer slagschaduwgevoelige objecten dan receptoren en elke receptor is een object, maar het omgekeerde is niet geldig.

De gedetailleerde slagschaduwmodelleringen zijn weergegeven in ‘Annex B: Gedetailleerde modelleringen’ bij deze slagschaduwstudie.

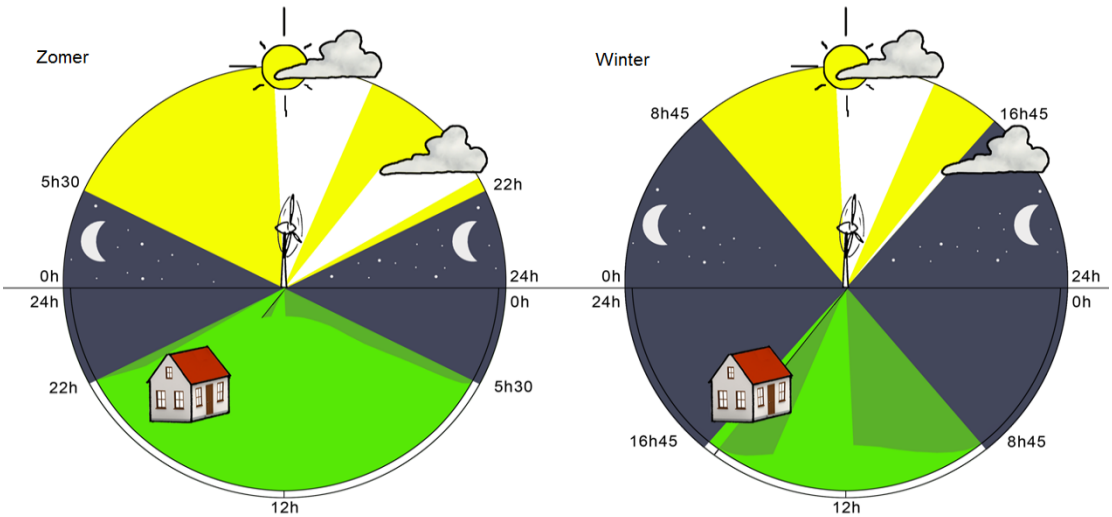
2 Wat is slagschaduw en de hinder ervan?

Slagschaduw wordt waargenomen wanneer een draaiende windturbine tussen de zon en de waarnemer staat, zonder dat een obstakel (een boom, een ander huis, een garage, torenflats,…) de slagschaduw verhindert.



Een wiek van een windturbine zal bij helder en zonnig weer een schaduw werpen op de achterliggende grond. Op bepaalde plaatsen en onder bepaalde omstandigheden kan de slagschaduw op een raam van een gebouw vallen en in die binnenruimte een hinderlijke wisseling van lichtsterktes veroorzaken.

Een slagschaduwgevoelig object wordt door de milieuregelgeving gedefinieerd als een binnenruimte waar slagschaduw van windturbines hinder kan veroorzaken. Het betreft concreet een woning, een kantoorgebouw of elk ander gebouw waarin mensen wonen en/of werken. Als er, met andere woorden, geen hinder kan optreden kan men ook niet spreken van een slagschaduwgevoelig object (bv een magazijn zonder raam, kantoorgebouwen buiten de kantooruren, gesloten technische ruimtes, een woning zonder ramen aan de kant van de windturbine, ….).

De zone waar slagschaduw kan optreden is variabel en hangt af van het seizoen en het moment van de dag. De zone waar slagschaduw kan optreden is typisch groter tijdens de lente- en herfstmaanden en dit gedurende de ochtendperiode en de laatste uren van de dag wanneer de zon laag staat en de schaduwkegel langer wordt.

Sowieso kan geen slagschaduw optreden in een cirkelsegment (van in totaal circa 80°) ten zuiden van de windturbine, gezien de zon nooit in het noorden staat.

Op Figuur 2-1 is te zien dat in de zomer (links) de zon ’s middags bijna loodrecht staat boven het aardoppervlak zodat de slagschaduwkegel klein is. Rechts wordt de grotere kegel weergegeven, die typisch is voor de winterperiode. Deze grotere kegel is het gevolg van de zon die dus onder een kleinere hoek staat ten opzichte van het aardoppervlak.

Figuur 2-1: Schaduwkegel in zomer- en winterperiode (resp. links en rechts).

Er zijn enkele componenten van belang om de hinder van slagschaduw te bepalen:

- De wisselfrequentie (ook wel de flikkerfrequentie genoemd). Uit onderzoek is gebleken dat het de hinder het grootst is bij flikkeringen met een frequentie van 2,5 tot 14 keer per seconde[2]. Er kunnen verschijnselen als zeeziekte optreden en bij mensen die hiervoor gevoelig zijn, kan een epileptische aanval optreden. Deze frequentie wordt bij moderne windturbines niet gehaald, waardoor deze component niet van belang is bij het

[2] bron: www.gezondheid.be

mogelijke hindereffect en waardoor ook voornoemde negatieve gezondheidseffecten niet worden verwacht. Het volle vermogen van een windturbine met een gemiddelde rotordiameter van 130 m, wordt gehaald bij een snelheid van ongeveer 10 omwentelingen per minuut4. Dit betekent voor een windturbine met drie bladen een flikkerfrequentie van 30 per minuut of 0,5 keer per seconde. De windturbine van het project heeft een grotere rotordiameter waardoor de frequentie hoogstwaarschijnlijk gelijk of nog lager zal zijn. De frequenties door rotatie van de windturbinebladen voor de zon liggen dus veel lager dan de frequentie die gezondheidshinder kan veroorzaken.

- de duur en het moment van de slagschaduw
- de afstand van de windturbines tot de gevoelige objecten, bij grotere afstanden is er minder hinder, doordat de wiek dan niet de hele zonneschijf kan verbergen.

3 Juridisch kader

De VLAREM regelgeving (VLAREM II, Afdeling 5.20.6.) vormt actueel het normenkader. In deze regelgeving worden volgende definities aangehouden:

- **Verwachte slagschaduw**: Het aantal uren slagschaduw dat aan de hand van de correcties met klimatologische maandnormalen verwacht mag worden.
- **Effectieve slagschaduw**: Het aantal uur slagschaduw dat effectief ter hoogte van een relevant slagschaduwgevoelig object opgetreden is, bepaald op basis van metingen of bepaald uit het logboek van de windturbines.
- **Slagschaduwgevoelig object**: een binnenruimte waar slagschaduw van windturbines hinder kan veroorzaken.

Als er, met andere woorden, geen hinder kan optreden kan men ook niet spreken van een slagschaduwgevoelig object (bv een magazijn, kantoorgebouwen buiten de kantooruren, gesloten technische ruimtes, een woning zonder ramen uitkijkend op de windturbines….).

De krachtlijnen van de VLAREM II-voorwaarden inzake slagschaduw zijn de volgende:

1. als een slagschaduwgevoelig object zich bevindt binnen de contour van vier uur verwachte slagschaduw per jaar van de windturbine, wordt de windturbine uitgerust met een automatische stilstand module.

2. de exploitant houdt een logboek bij per windturbine. Dat logboek vermeldt de nodige gegevens om de effectieve slagschaduw voor elk relevant slagschaduwgevoelig object binnen de contour van vier uur verwachte slagschaduw per jaar te bepalen. In het logboek worden voor elk relevant slagschaduwgevoelig object binnen de contour van vier uur verwachte slagschaduw per kalenderjaar volgende gegevens bijgehouden:

    1. de lijst van alle relevante slagschaduwgevoelige objecten met hun respectievelijke Lambertcoördinaten;

    2. een slagschaduwkalender voor elk relevant slagschaduwgevoelig object in tabelvorm waarin de astronomisch maximaal mogelijke slagschaduwduur voor elke windturbine wordt weergegeven.

3. de exploitant stelt minstens de eerste twee exploitatiejaren een controlerapport op, op basis van de gegevens vermeld in lid 1 en 2. Dat rapport vermeldt tenminste hoeveel effectieve slagschaduw elk relevant slagschaduwgevoelig object binnen de contour van vier uur verwachte slagschaduw per jaar heeft getroffen en welke remediërende maatregelen eventueel zijn genomen.

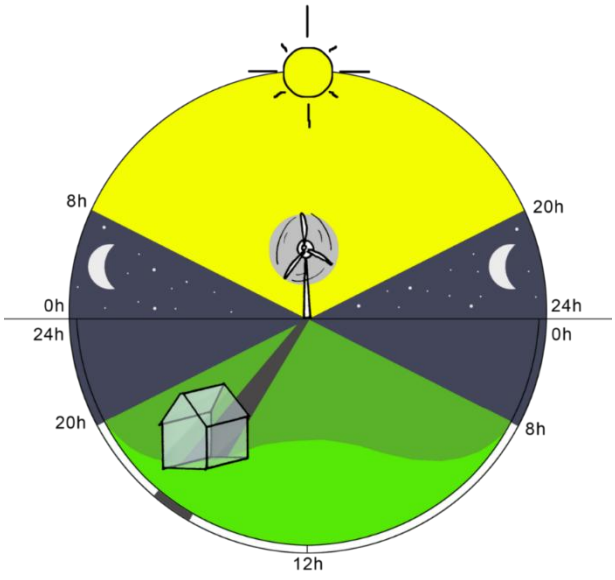
4. tenzij anders vermeld in de milieuvergunning, geldt voor elk relevant slagschaduwgevoelig object:

- **een maximum van 30 uur effectieve slagschaduw per jaar, met een maximum van dertig minuten effectieve slagschaduw per dag voor objecten in industriegebied (met uitz. van woningen)**
- **een maximum van 8 uur effectieve slagschaduw per jaar, met een maximum van dertig minuten effectieve slagschaduw per dag voor objecten in andere gebieden en alle woningen.**

4 Methodologie

Om het effect van de windturbine op vlak van slagschaduw te bepalen, wordt een slagschaduwmodellering uitgevoerd conform de voorwaarden opgenomen in het addendum R20.1.6 van het omgevingsvergunningsbesluit. Naast de locatie van de Windturbine zijn ook de afmetingen van de windturbine van belang voor de berekeningen.

De exacte afmetingen van de geplande windturbine is echter nog niet gekend. Daarom wordt in voorliggende nota telkens een worst-case windturbine gemodelleerd, met een maximale tiphoogte en rotordiameter. De maximale tiphoogte bedraagt 285m (geen bovengrondse sokkel). De maximale rotordiameter bedraagt 175 meter.



4.1 Slagschaduwbepaling

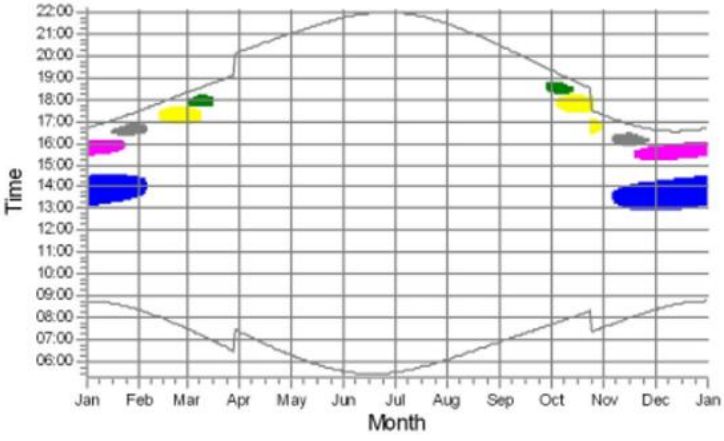
4.1.1 Astronomisch maximum

De berekening van het astronomisch maximum is nuttig om na te gaan op welke momenten en hoe lang slagschaduw zo3u kunnen optreden. Bij de bepaling van het astronomisch maximum van de slagschaduw worden volgende aannames gebruikt:

- **Zonneschijn**: De zon schijnt altijd van zodra ze op is en blijft schijnen tot ze onder is en wordt niet belemmerd door wolken.
- **Windsnelheid**: Er is steeds voldoende wind zodat de windturbine altijd draait. Ze stopt nooit wegens windstil, onderhoud of een andere reden.
- **Windrichting**: De wind komt steeds uit dezelfde richting als de zon (O->Z->W) waardoor de rotor steeds loodrecht op de zon staat. Dit resulteert in een maximale slagschaduw. Er wordt geen correctie doorgevoerd voor de werkelijke windrichting.
- **Locatie ramen van het object**: Het object wordt beschouwd als een serre met in elke gevel een raam op 1 m boven het maaiveld van 2 m hoog en 5 m breed. In de huidige milieuwetgeving wordt een huis dat als serre beschouwd wordt, omgeschreven als een “greenhouse”. Dit begrip zal verder zo in dit document gebruikt worden.
- **Oriëntatie ramen van het object**: Elke glaspartij is steeds gericht naar de zon (object ontvangt licht uit alle richtingen).
- **Obstakels**: Er zijn geen obstakels (noch natuurelementen, noch andere gebouwen) die zorgen voor een permanente schaduw en op die manier slagschaduw verhinderen.

Figuur 4-1 illustreert de aannames voor de bepaling van het astronomisch maximum voor een dag (0h tot 24h).

Figuur 4-1: Illustratie van het astronomisch maximum.



Deze aannames schetsen een **hypothetische worst-case situatie** zowel op meteorologisch vlak als op vlak van het object zelf. Het komt immers niet voor dat in elk huis of kantoorgebouw op elk moment van de dag een raam gericht is naar de windturbine.

De resultaten van de berekeningen worden weergegeven in een slagschaduwkalender (zie Figuur 4-2). Deze kalender geeft weer wanneer in het jaar en op welk moment tijdens de dag slagschaduw **in theorie** zou kunnen optreden ter hoogte van een bepaalde receptor. Op alle andere momenten kan sowieso geen slagschaduw optreden.

Er wordt een onderscheid gemaakt tussen slagschaduwkalenders van een (slagschaduwgevoelig) object en slagschaduwkalenders van een windturbine. Beide slagschaduwkalenders kunnen zowel numeriek als grafisch weergegeven worden.

- De **slagschaduwkalender van een object** geeft aan wanneer (datum en uur) er ter hoogte van het object in theorie slagschaduw zou kunnen optreden en van welke windturbine deze slagschaduw op dat ogenblik afkomstig is.
- De **slagschaduwkalender van een windturbine** geeft aan wanneer (datum en uur) deze windturbine in theorie slagschaduw kan veroorzaken op (minstens) één van de geselecteerde representatieve slagschaduwgevoelige objecten.

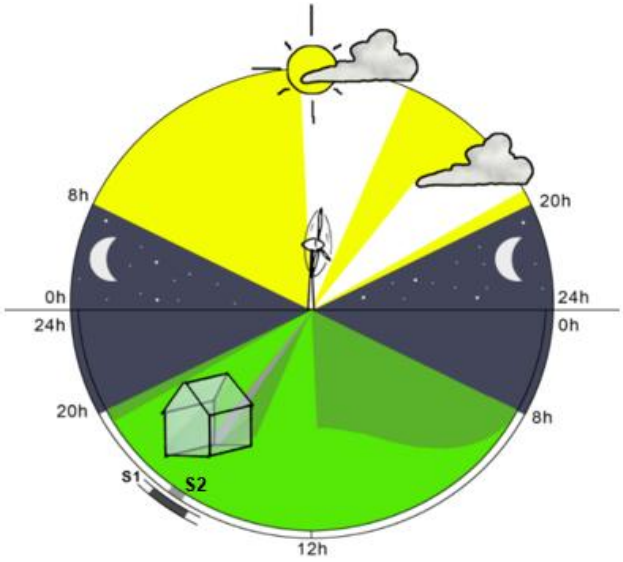
Figuur 4-2: Voorbeeld van een slagschaduwkalender van een receptor (Elk kleur stelt slagschaduw voor van een bepaalde windturbine op een gegeven moment).

In werkelijkheid treedt slagschaduw pas op tijdens die momenten waarop alle omstandigheden goed zitten. Dus wanneer bovenstaande aannames opgaan voor alle parameters (zonneschijn, windsnelheid, windrichting, locatie en oriëntatie van de ramen, obstakels). **Daarom zal het astronomisch maximum een overschatting zijn van de werkelijke verwachte slagschaduwduur.**

4.1.2 Verwachte slagschaduwduur voor representatieve greenhouse objecten

De bepaling van de te verwachten slagschaduw voor representatieve greenhouse objecten is een **conservatieve benadering van de realiteit**. Hierbij worden volgende aannames gebruikt:

- **Zonneschijn**: De zon wordt af en toe belemmerd door wolken en schijnt dus niet elke dag van zonsopgang tot zonsondergang.
- **Windsnelheid:** De windturbine draait vaak, maar niet bij windstille periodes.
- **Windrichting**: De windrichting is variabel en de rotor staat steeds loodrecht op de windrichting. Hierdoor staat de rotor niet steeds loodrecht op de zon.
- **Locatie ramen van het object**: Het object wordt nog steeds beschouwd als een serre (“greenhouse”) met in elke gevel een raam op 1 m boven het maaiveld van 2 m hoog en 5 m breed.
- **Oriëntatie ramen van het object**: Elke glaspartij is nog steeds gericht naar de zon (object ontvangt licht uit alle richtingen.



- **Obstakels**: Er zijn nog steeds geen obstakels (noch natuurelementen noch andere gebouwen) die zorgen voor permanente schaduw en op die manier slagschaduw verhinderen.

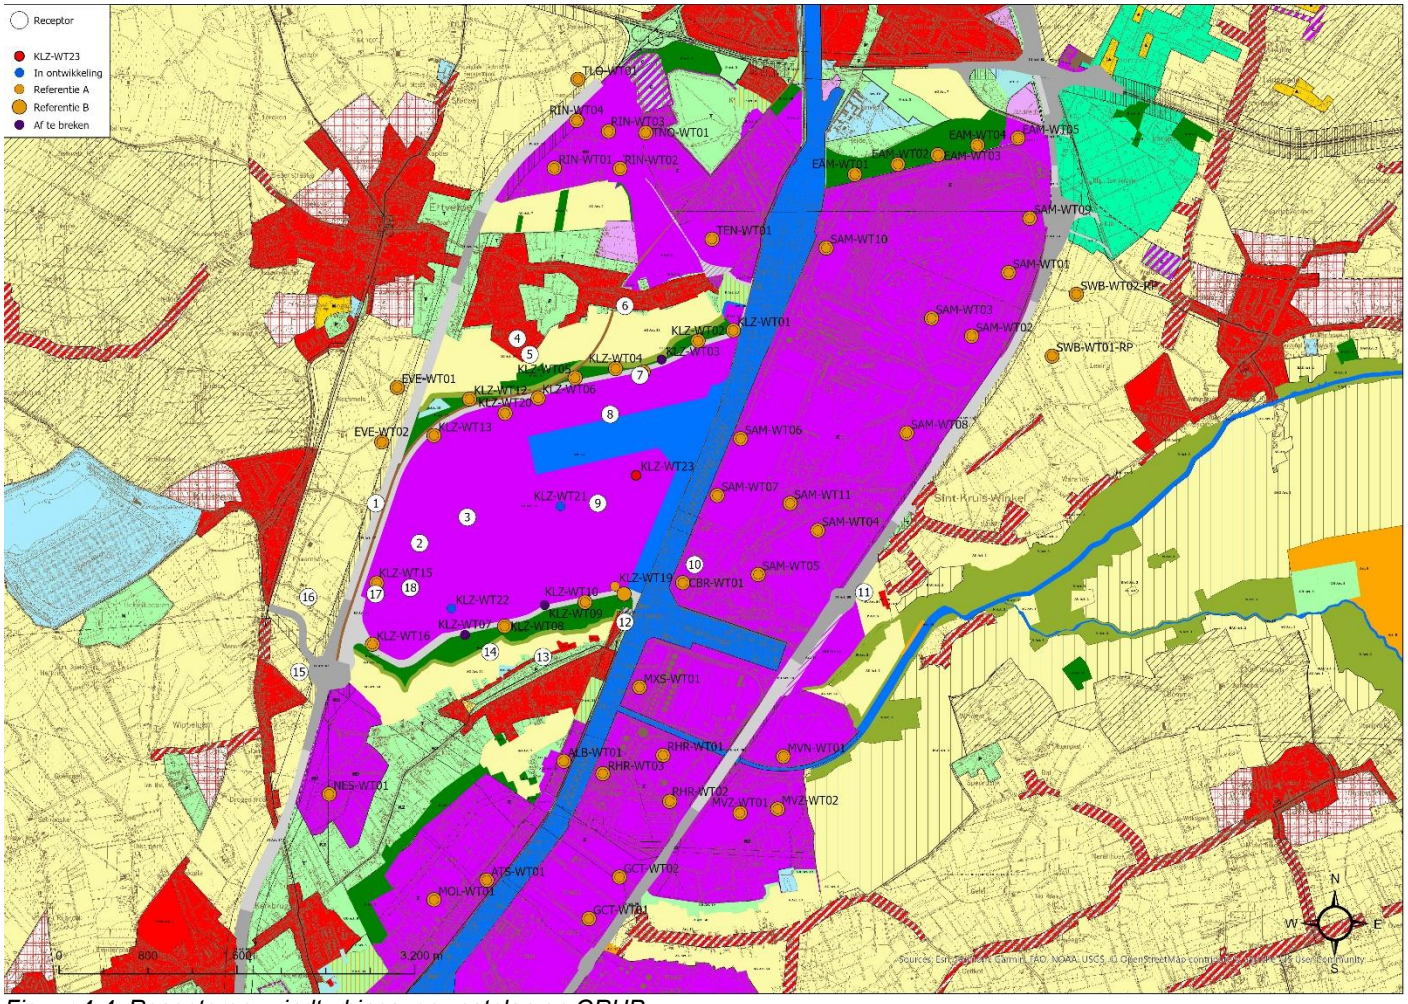
Deze methode is een conservatieve benadering van de realiteit. De normale gemiddelde meteorologische omstandigheden (bewolking, variabele windsnelheid en -richting) worden dus in rekening gebracht, maar het object is nog steeds theoretisch (locatie en oriëntatie van de ramen), net als de omgeving (vrij van obstakels zoals gebouwen of vegetatie).

Rekening houdend met normale omstandigheden voor zonneschijn, windsnelheid en windrichting, bedraagt de **verwachte slagschaduw voor een greenhouse slechts 10% tot 20% van de resultaten weergegeven in de slagschaduwkalenders** (het astronomisch maximum). Bovendien is dit nog steeds een overschatting van de werkelijkheid omwille van de conservatieve aannames voor het (onrealistische) object en de (lege) omgeving.

De resultaten van de berekening van de verwachte slagschaduwduur kunnen eveneens weergegeven worden op slagschaduwkalenders.

Figuur 4-3 illustreert dat de verwachte slagschaduw (aangeduid door S2 op de figuur) voor een greenhouse veel kleiner is dan het astronomisch maximum (aangeduid als S1 op de figuur) door het in rekening brengen van normale meteorologische omstandigheden (bewolking, variabele windsnelheid en -richting).

Figuur 4-3: Illustratie van de verwachte slagschaduw voor een greenhouse met een bewolkte hemel.



4.2 Slagschaduwmodelleringen

Het is gangbaar om slagschaduw slechts te beschouwen tot zonnehoeken groter dan 3° ten opzichte van de horizon[3]. Bij een lagere stand van de zon is het zonlicht immers te zwak en wordt er veel zonlicht afgeschermd door vegetatie en gebouwen. Rekening houdende met een maximale tiphoogte van 285 m voor de geplande windturbine in onderhavig project, kan het studiegebied bijgevolg bepaald worden door een circa 5,4 km straal rond het projectgebied te beschouwen.

De slagschaduwcontouren (slagschaduw per jaar in uur) zullen bepaald worden binnen dit studiegebied. Dit zal gebeuren ter hoogte van geselecteerde representatieve[4] relevante schaduwgevoelige objecten (of receptoren). In voorliggende nota wordt een selectie van 18 relevante receptoren beschouwd, voor dewelke de slagschaduwberekeningen uitgevoerd worden en slagschaduwkalenders opgesteld worden. Deze receptoren zijn slechts een selectie van alle relevante slagschaduwgevoelige objecten in het studiegebied. Deze receptoren werden geïdentificeerd op basis van luchtfoto's en berekende slagschaduwcontouren (isocontour van 0 en 4 uren

[3] Standaard instelling in WindPro.
[4] Conform VLAREM-verplichtingen voor vergunningsaanvragen

verwachte slagschaduw van de geplande windturbine). Deze selectie receptoren geeft reeds een goed beeld van de slagschaduwimpact van de geplande windturbine. De geselecteerde representatieve receptoren worden weergegeven in Tabel 4-1 (zie ook Figuur 4-4). Tevens wordt per receptor aangeduid of het gaat over een woning of een ander type van gebouw[5], al dan niet gelegen in industriegebied.

Figuur 4-4: Receptoren, windturbines, gewestplan en GRUP.

Tabel 4-1: Gegevens van de geselecteerde representatieve receptoren in functie van de slagschaduwberekeningen.

Receptor ID	Lambert 72 coördinaten		Omschrijving	Functie
	X (m)	Y (m)		
1	106439	205375	Hoogstraat 54, 9940 Evergem	Woning
2	106832	205016	Pachtgoederen 2, 9940 Evergem	Bedrijf

De isocontouren van de verwachte slagschaduw per jaar worden berekend met behulp van het rekenmodel WindPRO. De isocontourenkaart voor de verwachte slagschaduw wordt binnen dit rekenmodel opgemaakt via een berekening op een raster. In WindPRO is gekozen voor de resolutie ‘Coarse[6]. Het model berekent de verwachte slagschaduw naar de onmiddellijke omgeving waarbij met diverse invloeden rekening wordt gehouden:

- **Technische specificaties windturbines**: Het exacte type windturbine dat door de initiatienemer zal gebouwd worden, is momenteel nog niet gekend. Voor de berekening van de slagschaduwimpact wordt uitgegaan van een maximale tiphoogte van «MaximaleTip» m en een maximale rotordiameter van «MaximaleRotor» m. De ashoogte wordt uit deze waarden afgeleid[7]. De gegevens van de verschillende voor slagschaduw relevante windturbines zijn weergegeven in Tabel 4-2 in de lokalisatienota. Welke windturbine meegenomen is in welk scenario is weergegeven in Tabel 1-1.
- **Zonneschijnstatistieken:** De zon schijnt van zodra ze op is en blijft schijnen tot ze onder is, maar er zijn ook bewolkte periodes. Er werd uitgegaan van data van het KMI over een periode van 1991 t.e.m. 2020 (NIS 44019) voor de gemeente Evergem.
- **Windstatistieken:** De windturbine draait vaak, maar er zijn ook windstille periodes. Daarnaast draait de gondel met de wind mee. Voor de bepaling van het aantal draaiuren van een windturbine per windrichtingsector is uitgegaan van de windstatistieken o.b.v. de data van KNMI over een periode van 1999 t.e.m. 2018 op Lambert-72(m) coördinaat x: 107.059 y: 205.173.
- **Receptoren:** Volgende assumpties zijn van toepassing:
- Het object wordt beschouwd als een greenhouse;

[6] Er zijn 3 instellingen mogelijk in WindPRO: ‘coarse’ (grof), ‘normal’ en ‘fine’ (gedetailleerd). Bij de opmaak van het model werd er gerekend met de standaardinstelling “coarse”.
[7] In dit geval bedraagt de berekende ashoogte (voor de slagschaduwberekeningen): 285 – 175/2 = 197,5 meter. De gebouwde windturbine kan een andere (hogere of lagere) ashoogte hebben, maar de hier gehanteerde waarden voor (de combinatie van) tiphoogte, rotordiameter en ashoogte vormt het worst-case scenario voor slagschaduw.

- Elke glaspartij is steeds gericht naar de zon;
- Er zijn geen obstakels (noch natuurelementen, noch gebouwen of andere structuren) die zorgen voor permanente schaduw.

Door de meteorologische omstandigheden (zonneschijn, windsnelheid en windrichting) in rekening te brengen zoals hierboven opgelijst, wordt de te verwachten slagschaduw beperkt. Ook in realiteit wordt de zonneschijnduur immers beperkt door bewolking, is de windsnelheid niet steeds voldoende of soms te hoog om de windturbine te laten draaien, en veroorzaakt de specifieke stand van de rotor – als gevolg van de heersende windrichting – mogelijks geen slagschaduw op het bewuste object.

Deze methode is nog steeds een conservatieve benadering van de realiteit. De normale meteorologische omstandigheden (bewolking, variabele windsnelheid en -richting) worden weliswaar in rekening gebracht, maar het object blijft echter theoretisch (elk huis wordt immers als een serre beschouwd waarbij de glaspartij altijd gericht is naar de (bewegende) zon, net als de omgeving (die als volledig vrij van obstakels, zoals gebouwen of vegetatie, wordt beschouwd). Rekening houdend met normale omstandigheden voor zonneschijn, windsnelheid en windrichting zijn de aannames voor een serre (greenhouse object) en hun omgeving (‘leeg’) nog steeds zeer conservatief.

Naast de slagschaduwkaarten (met isocontouren van 4, 8, 16, … uur verwachte slagschaduw per jaar) zullen ook gedetailleerde slagschaduwkalenders worden opgemaakt. Ter hoogte van representatieve relevante slagschaduwgevoelige woningen of gebouwen zal naast de slagschaduw per jaar (in uur) ook de maximale slagschaduw die zich zou kunnen voordoen op een bepaalde dag in een volledig jaar (in minuten) berekend worden.

De resultaten worden getoetst aan de vigerende VLAREM II-normen.

5 Resultaten

Voor de slagschaduwberekeningen voor het project, referentiesituatie A, referentiesituatie B, de geplande situatie 1A, geplande situatie 1B, geplande situatie 2A en geplande situatie 2B wordt uitgegaan van de aannames besproken in §4.2.

De resultaten van de slagschaduwberekening van de verwachte slagschaduw per dag voor het project, referentiesituatie A, geplande situatie 1A en de geplande situatie 2A wordt weergegeven in Tabel 5-1. Analoog is er Tabel 5-2 met de berekening voor het project, referentiesituatie B, geplande situatie 1B en geplande situatie 2B.

De verwachte slagschaduw per jaar is weergeven in Tabel 5-3 en Tabel 5-4. Respectievelijk tonen ze de verwachte slagschaduwuren voor: Tabel 5-3: het project, referentiesituatie A, geplande situatie 1A, geplande situatie 2A;Tabel 5-4: het project, referentiesituatie B, geplande situatie1B en geplande situatie 2B.

Een groene kleur geeft aan waar er geen overschrijding van de slagschaduwnorm zal zijn voor een bepaalde receptor. Een rode kleur geeft aan waar er mogelijk een overschrijding is van de slagschaduwnorm voor een bepaalde receptor. In dat geval zijn milderende maatregelen nodig. De gedetailleerde resultaten (incl. slagschaduwkalenders) zijn terug te vinden in Annex B: Gedetailleerde modelleringen.

De referentiesituatie A en B wordt niet in detail beschreven maar afgaande op onderstaande tabellen (Tabel 5-1, Tabel 5-2, Tabel 5-3, Tabel 5-4) kan opgemaakt worden dat er reeds slagschaduw waarneembaar is. Deze bestaande en vergunde windturbines zijn ook operationeel conform de VLAREM-wetgeving waardoor de werkelijke slagschaduwduur per receptor beperkt blijft.

*Tabel 5-1: Berekende slagschaduwduur (**dagelijks maximum in uren**) voor het project, referentiesituatie A en geplande situatie 1A en 2A.*

5.1 Het project

Figuur 5-1 geeft de isocontouren weer voor de verwachte slagschaduwduur van het project (indien er geen afregeling zou zijn van de windturbine).

Figuur 5-1: Isocontouren voor de verwachte slagschaduw (uren per jaar) van het project, vóór het nemen van milderende maatregelen.

Om een duidelijk zicht te hebben van de verwachte slagschaduw van het project wordt het eerst los gezien van de context. Er wordt dus nog niet gekeken naar de verwachte slagschaduw die afkomstig is van bestaande, vergunde noch in ontwikkeling zijnde windturbines.

Beginnend met de verwachte slagschaduw per jaar, te zien in Figuur 5-1 en Tabel 5-4, daaruit blijkt dat geen enkele receptor een overschrijding heeft van de norm 3van maximaal 30 uur verwachte slagschaduw in gebouwen in industriegebied en maximaal 8 uur in alle andere gevallen (relevante voorbeelden hier: woningen in woongebied, zonevreemde woningen, zonevreemde bedrijven en conciërgewoningen) (§3).

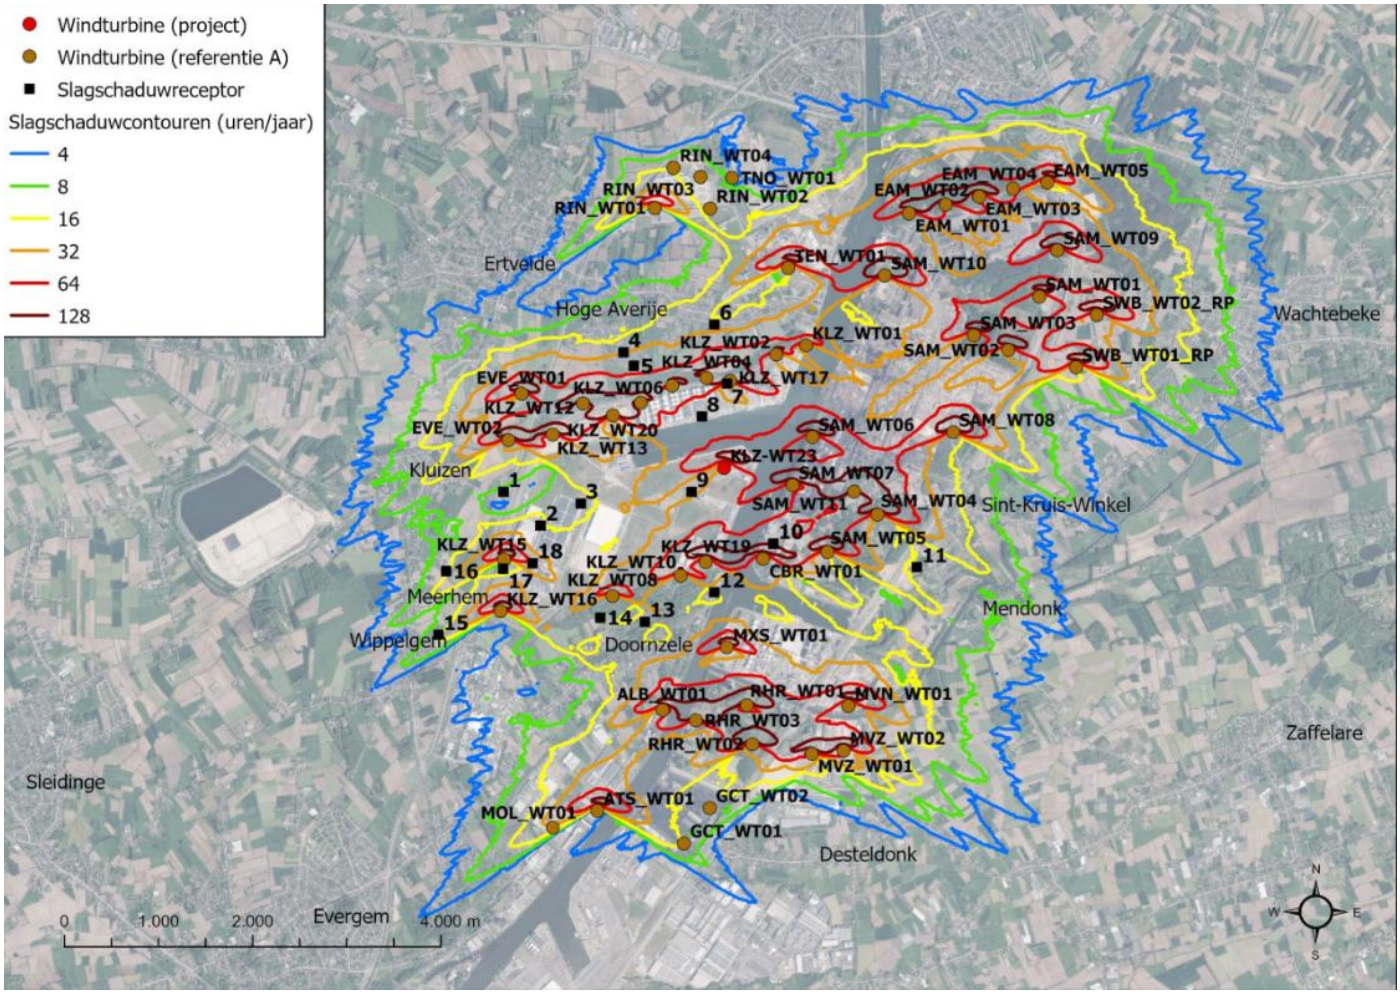
Sterker nog, er zijn een groot aantal receptoren waar er zelfs geen verwachte slagschaduw zal optreden. Het gaat om volgende receptoren:

- Receptor 6: Woning liggende in woongebied Rieme (zie Hoge Averije Figuur 5-1). Het ligt voldoende ver noordwaarts dat de turbine geen verwachte slagschaduw geeft daar. **Het wijst er ook meteen op dat deze volledige woonkern geen verwachte slagschaduw zal ondervinden van het project.**
- Receptor 9: Bedrijf liggend in industriegebied Kluizendok. Is gelegen ten zuiden van het project en gegeven de gebruikelijke schijnbare baan van de zon; oost-zuid-west; zal er nooit slagschaduw zijn in het zuiden. Bijgevolg zullen alle receptoren ten zuiden van de windturbine nooit slagschaduw hebben.
- Receptor 10: Bedrijf liggend in industriegebied aan de oostkant van Kanaal Gent-Terneuzen, ten zuidoosten van het project. Geeft een indicatie tot waar dit “slagschaduwvrij zuiden” reikt en waar er dus geen slagschaduw is.

- Receptor 12: Woning in woongebied Doornzele (uiterst noordoostelijk deel). **De volledige woonkern Doornzele ligt ten zuiden en voldoende verwijderd van het project en zal dus ook geen slagschaduw hebben van het project.**
- Receptor 13: Woning in woongebied Doornzele en bijgevolg analoog aan receptor 12.
- Receptor 14: Zonevreemde woning ten noordwesten van Doornzele en ten zuidwesten van het project. Geeft een indicatie van slagschaduwvrij gebied in westelijke richting.
- Enkel receptor 8 ziet een beduidende toename in verwachte slagschaduwuren per jaar. Het gaat over het bedrijf en de opslagsite van Zoutman die op ongeveer 600m gelegen is ten noorden van het project, aan de andere zijde van het Kluizendok in industriegebied, deze blijft evenwel binnen de norm.

Tabel 5-3 licht de verwachte slagschaduwuren toe per dag. Zonder toepassen van een automatische stilstandsmodule is er mogelijk een overschrijding van de dagnorm van 30 minuten bij drie receptoren. Het gaat over volgende receptoren:

- Receptor 5: Woning in woongebied Rieme, ten noordwesten van het project. Hier wordt een overschrijding van 1 minuut vastgesteld.
- Receptor 7 (13 min. overschrijding) en 8 (39 min. overschrijding): Respectievelijk voor- en achterkant van opslagsite Zoutman ten noorden van het project vrij dicht gelegen op ongeveer 600 à 900 meter. Merk wel op dat de silo's fungeren als een afscherming tegen slagschaduw waardoor enkel de kaai en de toegangswegen hier potentieel last van kunnen ondervinden.



Voor de overige receptoren wordt de dagnorm gerespecteerd, ook zonder toepassing van een automatische stilstandsmodule.

Gelet de berekening vertrekt van conservatieve aannames zoals besproken in §4.1.2, zal de werkelijke slagschaduwduur voor menig receptoren (en slagschaduwgevoelige objecten tout court) beduidend minder zijn.

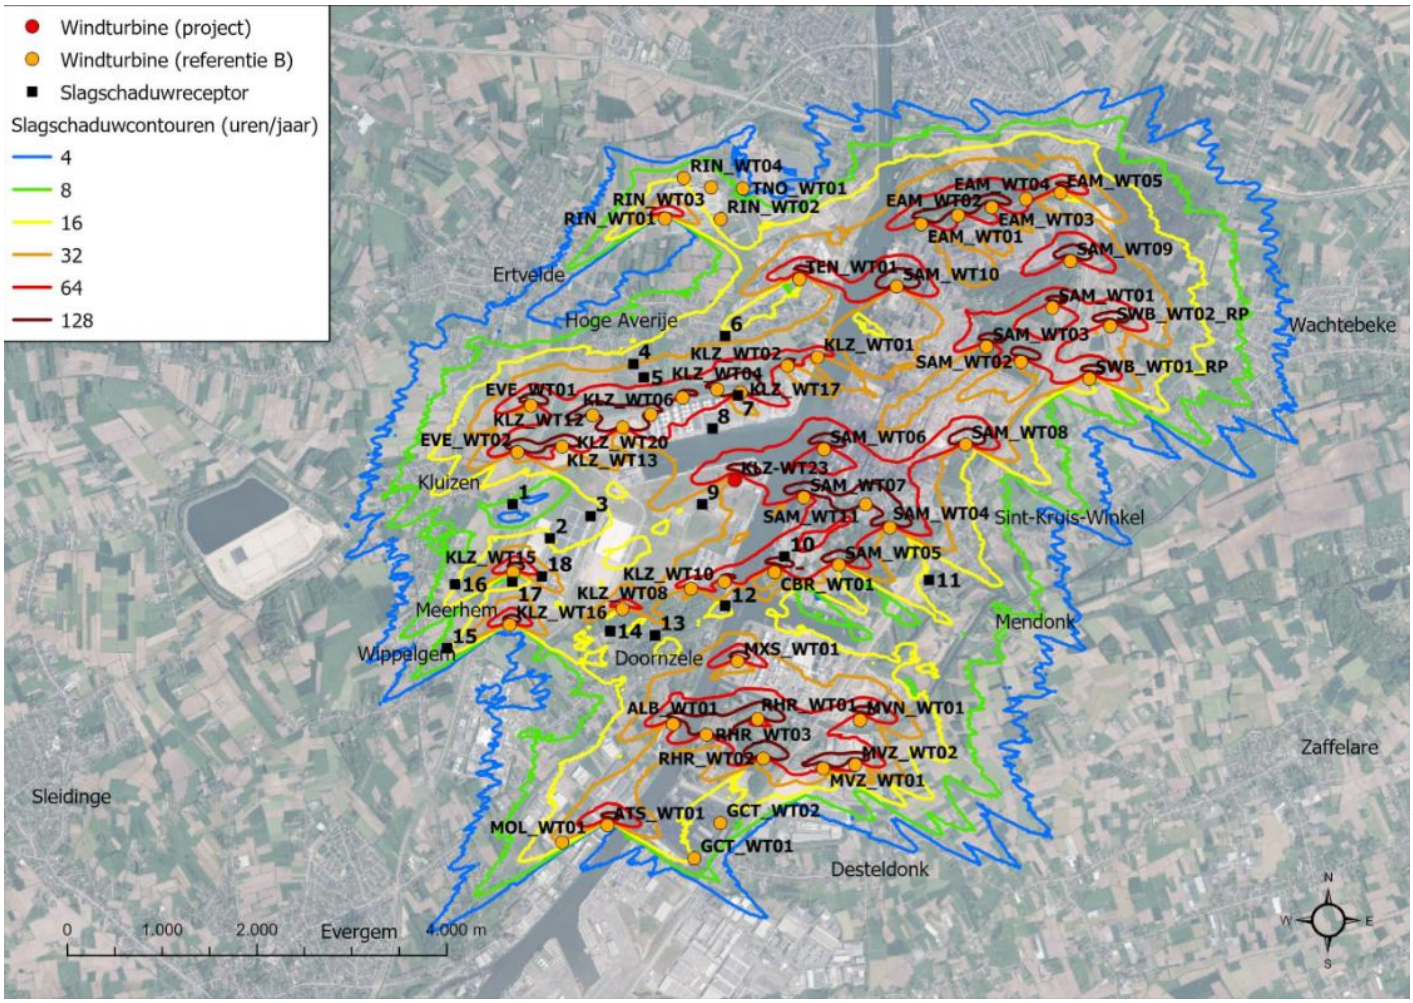
Door toepassing van een automatische stilstandsmodule kan de toepasselijke VLAREM II norm te allen tijde gerespecteerd worden. Hierdoor zal de hinder tijdens de exploitatie ter hoogte van de vermelde receptoren beperkt worden tot de Vlarem II-normen en zodus tot een aanvaardbaar niveau.

5.2 Geplande situatie 1A

Figuur 5-2 geeft de isocontouren weer voor de verwachte slagschaduwduur per jaar voor de geplande situatie 1A (indien er geen afregeling zou zijn van de geplande windturbine).

Figuur 5-2: Isocontouren voor de verwachte slagschaduw (uren per jaar) van de geplande situatie 1, vóór het nemen van milderende maatregelen.

Wanneer de geplande situatie 1A (project + referentiesituatie A) wordt beschouwd, dan blijken een aantal receptoren binnen de isocontour van 8 u (voor woningen) en 30 u (voor gebouwen in industriegebied, uitgezonderd woningen) verwachte potentiële slagschaduw gelegen te zijn, wanneer geen milderende maatregelen in rekening gebracht worden. Merk daarbij op dat de verwachte slagschaduwuren per jaar hoofdzakelijk bepaald wordt door de bestaande windturbines, zie daarbij referentiesituatie A in Tabel 5-3. Die geeft ook meteen aan dat zonder de gebruikelijke maatregelen slechts één receptor (receptor 8) een extra overschrijding ziet. Mits maatregelen (automatische stilstandsmodule) zal voor geen enkele receptor een overschrijding kunnen worden vastgesteld. Ter verduidelijking receptor 8 (Christoffel Columbuslaan 23) is gelegen in industriegebied op circa 600 meter ten noorden van het project aan de overzijde van het dok Kluizendok en heeft dan ook begrijpelijkerwijs een toename in verwachte slagschaduw (mocht er wederom niet gemilderd worden).



De daglimiet heeft een gelijkaardig patroon. De maximum van 30 minuten verwachte slagschaduw per dag wordt in referentiesituatie A in zes van de achttien gevallen gehaald (Tabel 5-1) en het is dan afgaand op het aantal overschrijdingen ook duidelijk dat het project hier een minimale impact op heeft.

Tabel 5-1 geeft ook aan dat er zonder milderende maatregelen geen toename is in het aantal receptoren waarbij deze norm overschreden wordt.

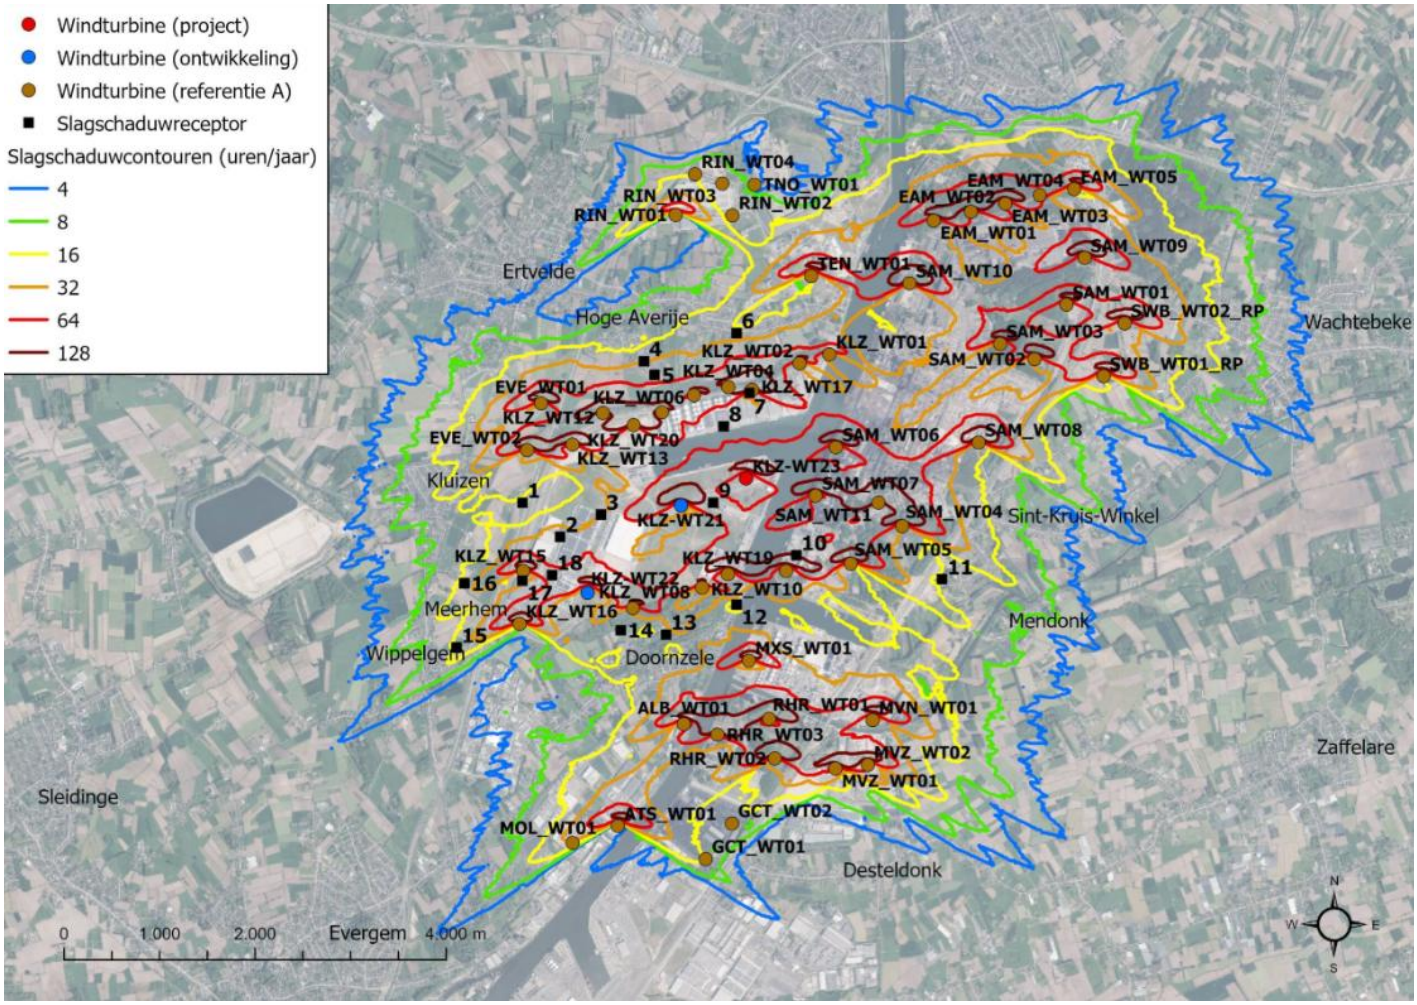
Door toepassing van een automatische stilstandsmodule kan de toepasselijke VLAREM II norm te allen tijde gerespecteerd worden. Hierdoor zal de hinder tijdens de exploitatie ter hoogte van de vermelde receptoren beperkt worden tot de Vlarem II-normen en zodus tot een aanvaardbaar niveau.

5.3 Geplande situatie 1B

Figuur 5-3 geeft de isocontouren weer voor de verwachte slagschaduwduur per jaar voor de geplande situatie 1B (indien er geen afregeling zou zijn van de geplande windturbine).

Figuur 5-3: Isocontouren voor de verwachte slagschaduw (uren per jaar) van de geplande situatie 1B (voor het nemen van milderende maatregelen).

Geplande situatie 1A en 1B zijn quasi hetzelfde op de situatie van KLZ-WT19 en KLZ-WT11 na. Het is dan ook evident dat de verwachte slagschaduw dezelfde zal zijn behalve op plaatsen die beïnvloed worden door de twee windturbines. Vandaar dat hier enkel gekeken wordt naar de verwachte slagschaduw binnen die context.



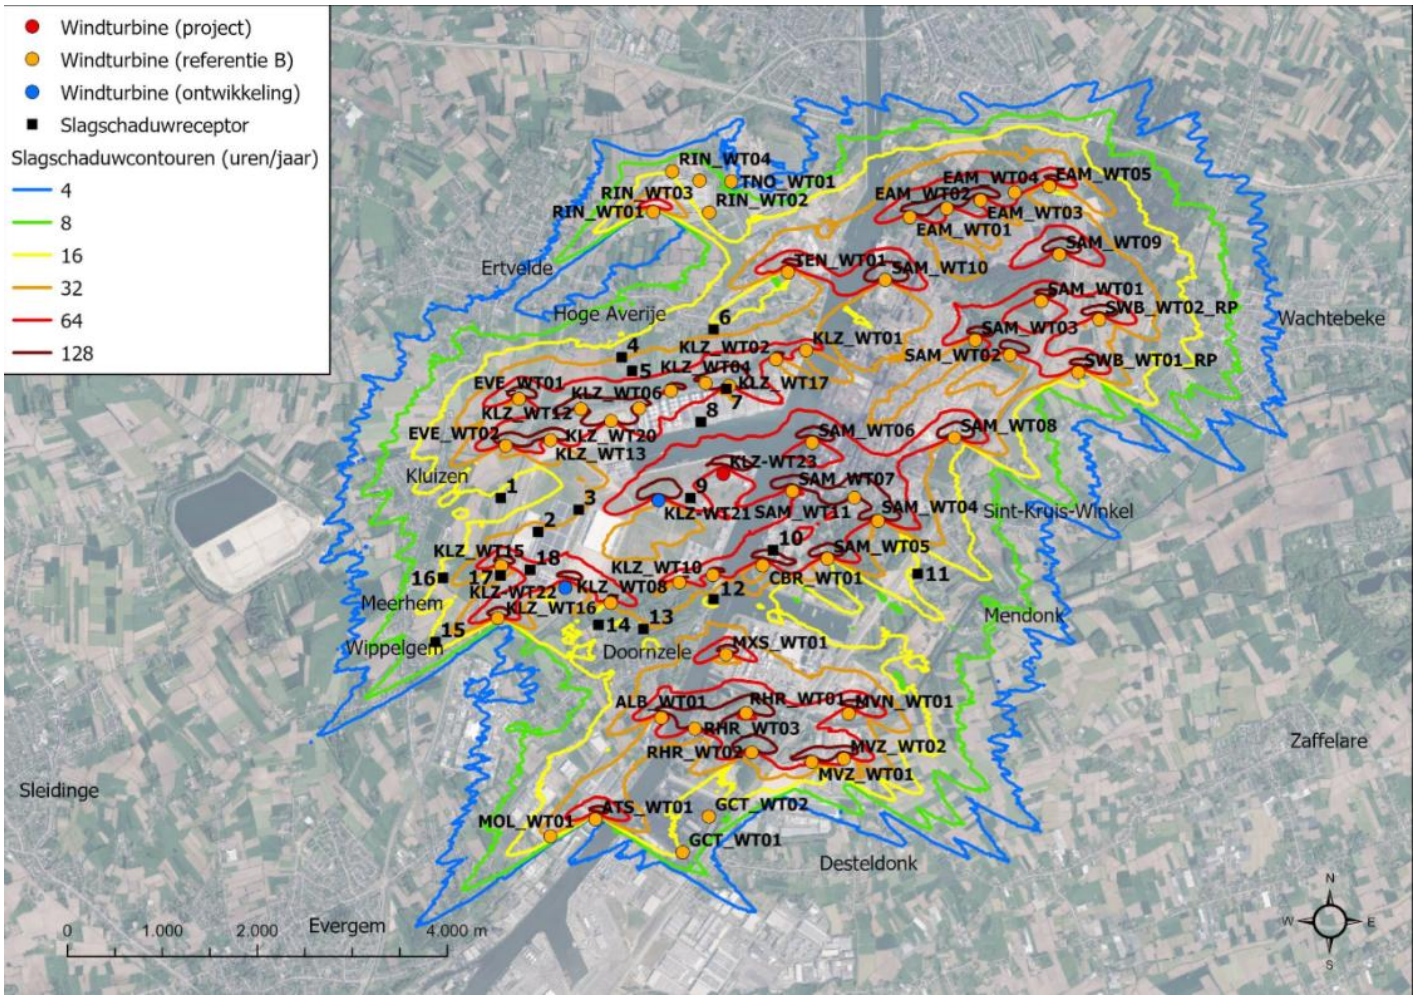
Deze nagenoeg identieke situatie vertaalt zich dan ook in zeer gelijkaardige verwachte slagschaduwuren per dag en per jaar. Behalve de precieze waarden zijn het ook telkens dezelfde receptoren die (niet gemilderd) voldoen en niet voldoen aan de normen.

In geplande situatie 1B wordt KLZ-WT19 niet gebouwd en blijft KLZ-WT11 operationeel wat betekent dat er slagschaduw is van relatief kleine windturbine KLZ-WT11 (rotor 72m tiphoogte 92m) in plaats van die van de voorziene vergunde windturbine KLZ-WT19 met rotor 168m en tiphoogte 250m. Dit vertaalt zich dan ook naar een kleiner invloedsgebied met een beperkter cumulatief effect op de slagschaduwuren. Een vergelijking tussen Tabel 5-3 en Tabel 5-4 en tussen Tabel 5-1 en Tabel 5-2 toont dan ook aan dat verschillende receptoren in geplande situatie 1B minder verwachte slagschaduwuren hebben en dat zowel per dag als per jaar alhoewel dit op jaarbasis zich logischerwijs cumulatief meer uit.

Door toepassing van een automatische stilstandsmodule kan de toepasselijke VLAREM II norm te allen tijde gerespecteerd worden. Hierdoor zal de hinder tijdens de exploitatie ter hoogte van de vermelde receptoren beperkt worden tot de Vlarem II-normen en zodus tot een aanvaardbaar niveau.

5.4 Geplande situatie 2A

Figuur 5-4 geeft de isocontouren weer voor de verwachte slagschaduwduur per jaar voor de geplande situatie 1B (indien er geen afregeling zou zijn van de geplande windturbine).



Figuur 5-4 geeft de isocontouren weer voor de verwachte slagschaduwduur voor de geplande situatie 2A (voor het nemen van milderende maatregelen).

Het betreft het project, referentiesituatie A en de relevante windturbines in ontwikkeling (KLZ-WT21 en KLZ-WT22). In geplande situatie 2A is te zien (Figuur 5-4) dat de jaarlijkse norm overschreden wordt bij bijna elke receptor (uitgezonderd receptor 17). De ontwikkeling van twee andere windturbines in Kluizendok zorgt ervoor dat er meer receptoren in en rond industriegebied Kluizendok zowel qua daglimiet als jaarlimiet een overschrijding kent. Dit is van uitgaand dat ook bestaande windturbines niet gemilderd worden.

Door toepassing van een automatische stilstandsmodule kan de toepasselijke VLAREM II norm te allen tijde gerespecteerd worden. Hierdoor zal de hinder tijdens de exploitatie ter hoogte van de vermelde receptoren beperkt worden tot de Vlarem II-normen en zodus tot een aanvaardbaar niveau.

5.5 Geplande situatie 2B

Figuur 5-5 geeft de isocontouren weer voor de verwachte slagschaduwduur per jaar voor de geplande situatie 1B (indien er geen afregeling zou zijn van de geplande windturbine).

Figuur 5-5: Isocontouren voor de verwachte slagschaduw (uren per jaar) van de geplande situatie 2B, vóór het nemen van milderende maatregelen.

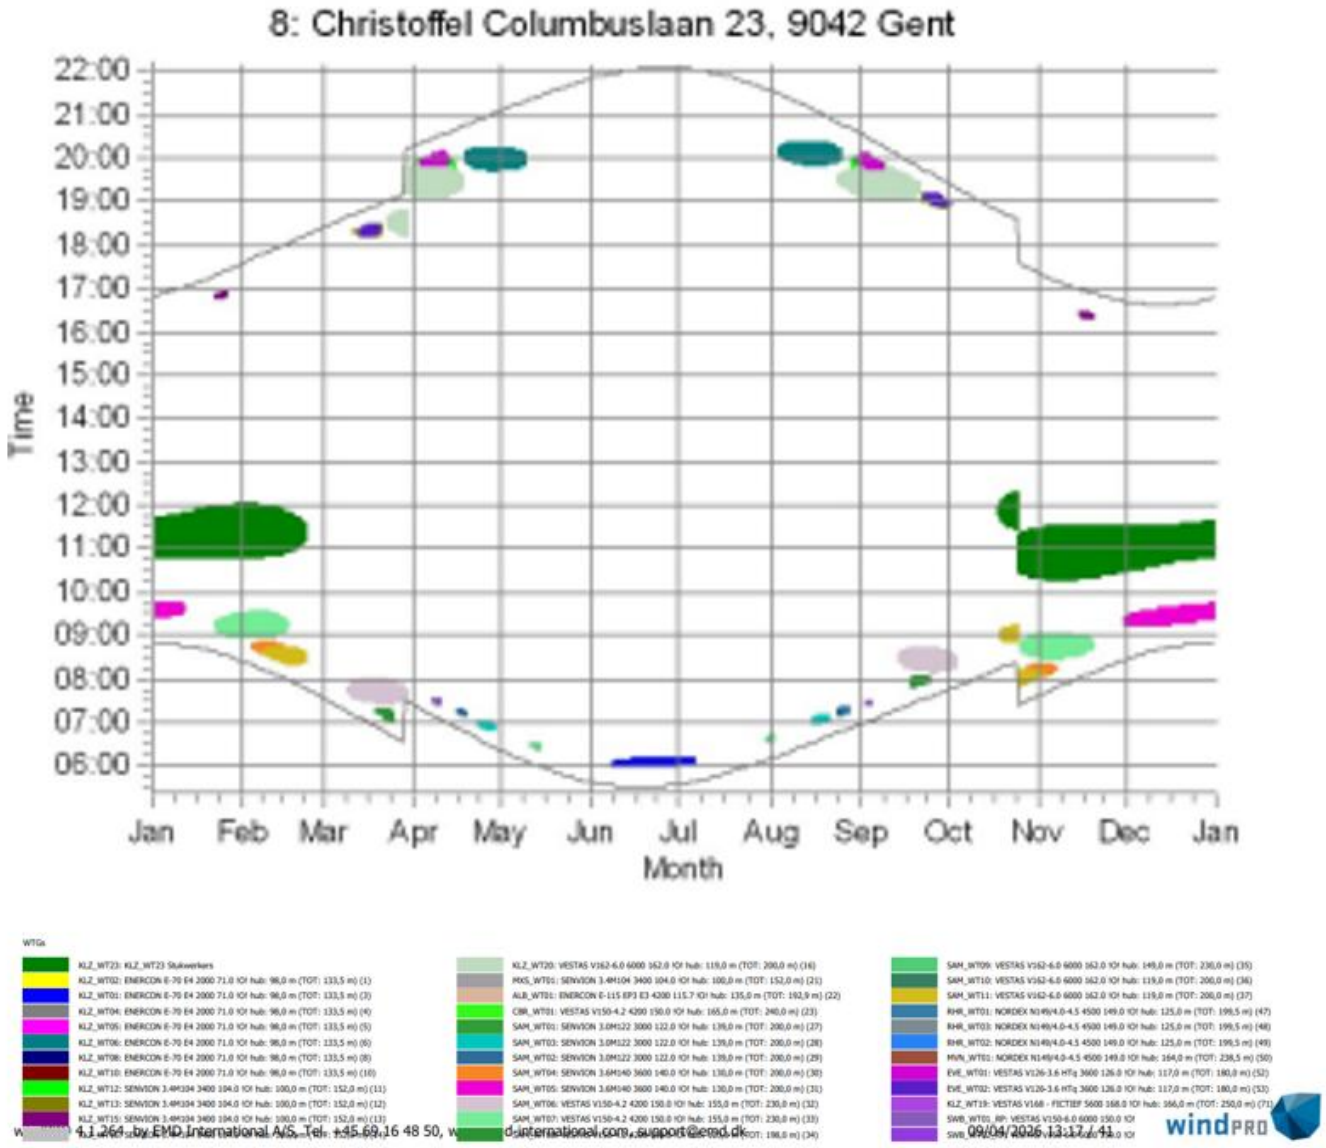
Geplande situatie 2B behelst project, referentiesituatie B en de relevante windturbines in ontwikkeling. Dit maakt dat het in se dezelfde cumulatieve slagschaduweffecten heeft als in 2A afgezien de lokale impact van KLZ-WT11 en KLZ-WT19. Om de lokale impact qua verwachte slagschaduw van het niet realiseren van KLZ-WT19 en dus behouden van KLZ-WT11 te begrijpen kan teruggegrepen worden naar §5.3.

Voor alle scenario's kan altijd vanuit gegaan worden van volgende:

Door toepassing van een automatische stilstandsmodule kan de toepasselijke VLAREM II norm te allen tijde gerespecteerd worden. Hierdoor zal de hinder tijdens de exploitatie ter hoogte van de vermelde receptoren beperkt worden tot de Vlarem II-normen en zodus tot een aanvaardbaar niveau.

5.6 Detailbespreking van enkele representatieve receptoren

Gezien niet geweten is of dat de windturbines in ontwikkeling effectief zullen worden gerealiseerd, wordt er gewerkt met geplande situatie 1A voor het bespreken van enkele representatieve receptoren met name receptor 8 en receptor 12.



Receptor 8 – Bedrijf ter hoogte van Cristoffel Columbuslaan 23 (Gent)

Receptor 8 is gelegen ten noorden van KLZ-WT23. De slagschaduwkalender is weergegeven in Figuur 5-6. De resultaten voor deze receptor worden in onderstaande Tabel 5-5 samengevat.

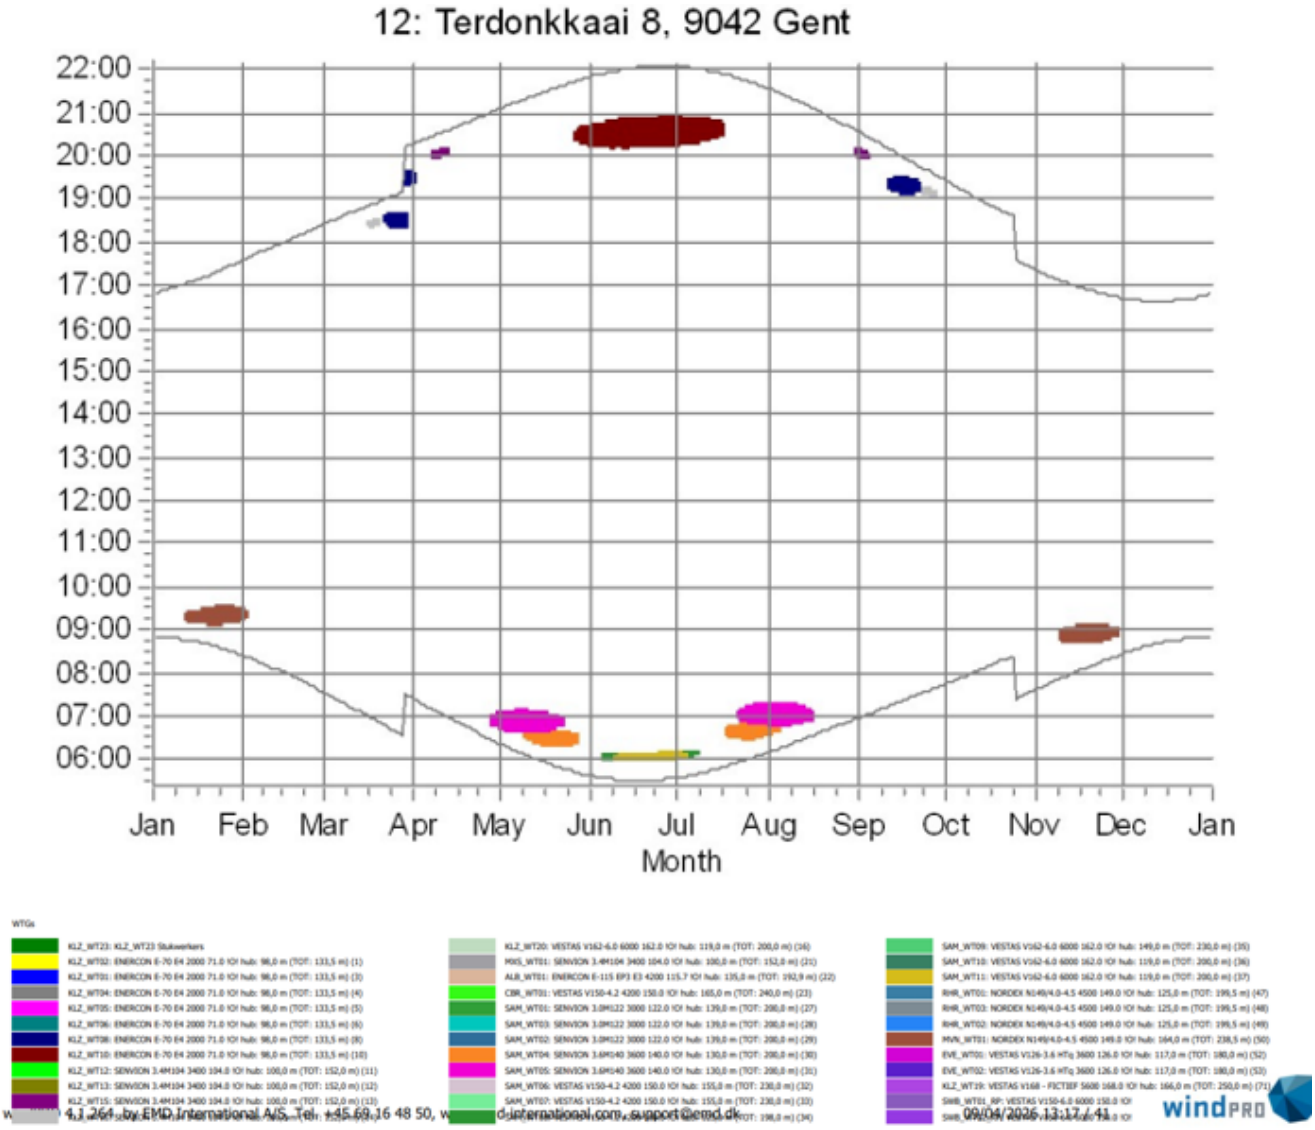
Tabel 5-5: Resultaten slagschaduwmodellering voor receptor 8.

Aspect	Resultaat
Maanden met slagschaduw	Hele jaar
Momenten van de dag	Ochtend, Voormiddag, Middag, Avond
Door welke windturbine (hoofdzakelijk)	KLZ-WT23, KLZ-WT20, KLZ-WT06, SAM-WT07, SAM-WT06, SAM-WT05, SAM-WT04
VLAREM jaarnorm gerespecteerd?	Neen (ca. 41u 52min/jaar bij geplande situatie 1A)
VLAREMdagnorm gerespecteerd?	Neen (max. 1u 45min/dag bij geplande situatie 1A)
Nood aan milderende maatregelen?	Ja

De slagschaduwkalender is representatief voor een aantal andere receptoren. Dit geldt onder meer voor de receptoren gelegen ter hoogte van de Christoffel Columbuslaan. De receptor kan vooral slagschaduw ondervinden in de ochtend, voormiddag en avond doorheen het jaar. KLZ-WT23 geeft mogelijks slagschaduw gedurende de middag en dat in de wintermaanden. Ter hoogte van receptor 7 wordt naar verwachting ook niet voldaan aan de jaarlimiet en daglimiet wat betreft geplande situatie 1A.

Figuur 5-6: Slagschaduwkalender vóór het nemen van milderende maatregelen, ter hoogte van receptor 8, gelegen ten noorden van het project.

Receptor 12 – Woning ter hoogte van Terdonkkaai 8 (Gent)



Receptor 12 is gelegen ten zuiden van het project. De slagschaduwkalender is weergegeven in Figuur 5-7. De resultaten voor deze receptor worden in onderstaande Tabel 5-6 samengevat.

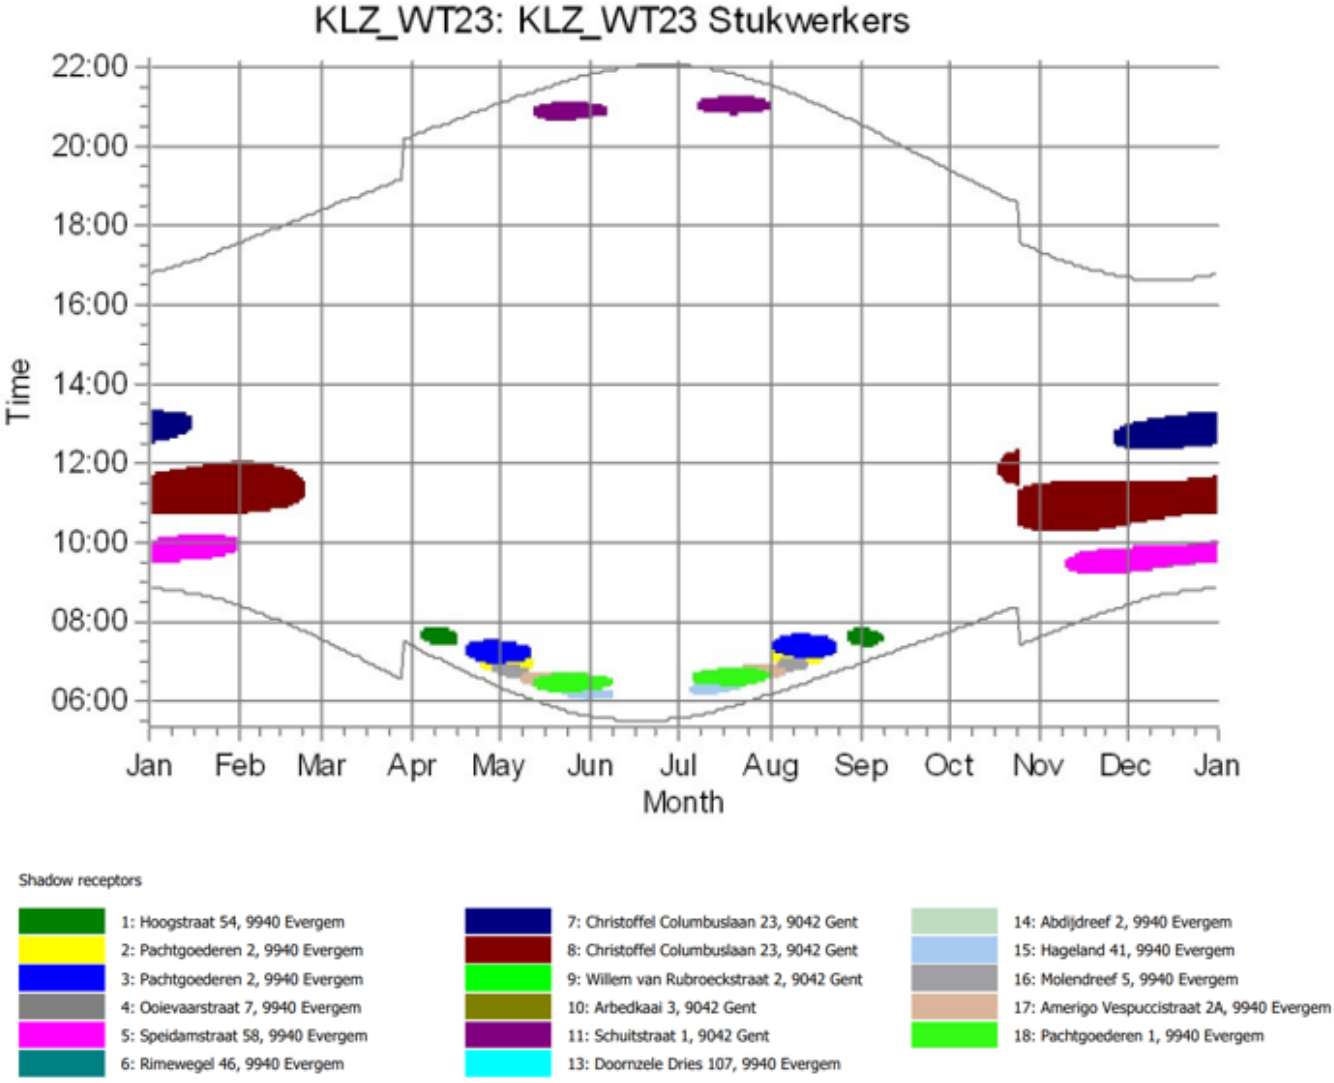
Tabel 5-6: Resultaten slagschaduwmodellering voor receptor 12.

Aspect	Resultaat
Maanden met slagschaduw	Januari, April, Mei, Juni, Juli, Augustus, September, Oktober, November
Momenten van de dag	Avond (ca. 18:00 – 21:00 uur) Ochtend (ca. 6:00 – 7:15 uur) en (ca. 9:00 – 9:30)
Door welke windturbine (hoofdzakelijk)	KLZ-WT10, SAM-WT05, SAM-WT04, MVN-WT01, KLZ-WT08

Aspect	Resultaat
VLAREM jaarnorm gerespecteerd?	Nee (max. ca. 16u 58 min/jaar bij geplande situatie 1A)
Vlarem dagnorm gerespecteerd?	Nee (max. ca. 43 min/dag bij geplande situatie 1A)
Nood aan milderende maatregelen?	**Ja**

De slagschaduwkalender is representatief voor een aantal andere receptoren. Dit geldt onder meer voor de receptoren 13 en 14 gelegen ter hoogte van Doornzele. Deze receptoren ondervinden geen slagschaduw van het project (KLZ-WT23). De receptoren kunnen vooral slagschaduw ondervinden van de bestaande en vergunde windturbines in de ochtend en avond tijdens bijna alle maanden. Ter hoogte van deze receptoren wordt niet voldaan aan de jaarlimiet en daglimiet en vergen dan ook mildering.

Figuur 5-7: Slagschaduwkalender vóór het nemen van milderende maatregelen, ter hoogte van receptor 12, gelegen ten zuiden van van het project.



5.7 Bespreking van slagschaduweffecten per windturbine

De mogelijke slagschaduw die door een individuele windturbine kan veroorzaakt worden ter hoogte van verschillende receptoren, kan eveneens grafisch voorgesteld worden aan de hand van een slagschaduwkalender. De verschillende kleurvakken geven aan wanneer slagschaduw kan op treden ter hoogte van de verschillende geselecteerde receptoren. Dergelijke slagschaduwkalenders geven een eerste beeld van de stilstanden (slagschaduwmodule) op de energieproductie.

In Annex B: Gedetailleerde modelleringen, bij deze studie zijn de slagschaduwkalenders opgenomen van alle geplande en bestaande/vergunde windturbines.

Windturbine KLZ-WT23

In Figuur 5-8 wordt de slagschaduwkalender voor de geplande windturbine KLZ-WT23 van voorliggend project getoond. Er dient benadrukt te worden dat deze figuur voor elke receptor het theoretisch maximaal aantal uren slagschaduw in een gemiddeld jaar voor afregeling van de windturbine toont. Dit is dus een **worst-case weergave**. Anderzijds zijn niet alle slagschaduwgevoelige objecten opgenomen in de figuur maar slechts een selectie van representatieve receptoren. Toch kan deze figuur reeds een idee geven van de grootte van de impact inzake slagschaduw van de geplande windturbine.

Figuur 5-8: Grafische voorstelling van de slagschaduwkalender voor de geplande windturbine KLZ-WT23 voor afregeling van de windturbine.

De slagschaduwkalender (Figuur 5-8) geeft aan dat gedurende de wintermaanden er slagschaduw kan zijn tijdens de voormiddag en middag (rond 9:45 tot 13:30) in receptoren 5, 7, 8. Van april tot september is er slagschaduw

mogelijk ‘s ochtends tussen 6:00 en 8:00 in receptoren: 1,2, 3,15, 16, 17, 18. In mei en juli is er slagschaduw mogelijk in receptor 11 avonds tussen ongeveer 20:30 en 21:30.

6 Automatische stilstandsmodule

Op basis van voorliggende slagschaduwstudie zijn milderende maatregelen noodzakelijk. Gezien er verschillende receptoren gelegen zijn binnen de 4-uur slagschaduwcontour van het project, dienen de windturbines conform artikel 5.20.6.2.1. van VLAREM uitgerust te worden met een automatische stilstandsmodule. Door het toepassen van deze module zullen de VLAREM-slagschaduwnormen (zie paragraaf §3) ter hoogte van alle slagschaduwgevoelige objecten ten alle tijden gerespecteerd worden. Alle relevante slagschaduwgevoelige objecten binnen de isocontour van 4 uur, zullen opgenomen worden in het systeem van de logboeken.

De slagschaduwmodule is in staat om de aanwezigheid van slagschaduw en zijn locatie (de projectie van de slagschaduw op slagschaduwgevoelige objecten) vast te stellen alsook rekening te houden met eventuele andere windturbines in de omgeving (cumulatieve effecten). Bovendien bevat de slagschaduwmodule ook de nodige gegevens om te bepalen wanneer de slagschaduwnorm dreigt overschreden te worden voor een bepaald slagschaduwgevoelig object. Hiertoe worden de locaties van alle relevante slagschaduwgevoelige objecten geprogrammeerd in de slagschaduwmodule. De slagschaduwmodule ‘kent’ op deze manier alle relevante slagschaduwgevoelige objecten. Wanneer de slagschaduwnorm dreigt overschreden te worden voor één van deze objecten, wordt de windturbine automatisch tot stilstand gebracht. De slagschaduwmodule registreert automatisch de slagschaduwduur en de duur van de stilstand voor elk relevant object. Zie ook ‘Annex A: Automatische stilstandsmodule’ voor meer informatie over deze module.

Door toepassing van het slagschaduwdetectiesysteem met automatische stilstand module zal de slagschaduwduur beperkt worden tot een maximum van 8 uur effectieve slagschaduw per jaar en een maximum van dertig minuten effectieve slagschaduw per dag voor woningen en tot een maximum van 30 uur effectieve slagschaduw per jaar en een maximum van dertig minuten effectieve slagschaduw per dag voor slagschaduwgevoelige objecten in industriegebied (uitz. woningen). Voor het overige dringen er zich geen milderende maatregelen op.

Na het verkrijgen van de vergunningen en ter voorbereiding van de operationele fase kunnen de noodzakelijke maatregelen[8] verfijnd worden.

[8] Andere voorbeelden van milderende maatregelen, zijn het stilleggen van de windturbine (s) bij bepaalde omstandigheden en fysieke afscherming. Fysieke afscherming omvat bijvoorbeeld het plaatsen van zonnewering, maar ook het aanleggen van een permanente afscherming zoals een groenscherm, beplanting, etc. Fysieke afscherming wordt zelden toegepast en slechts in specifieke omstandigheden en in samenspraak met de potentieel gehinderde

7 Conclusies slagschaduwimpact

In deze slagschaduwstudie werd de verwachte slagschaduw ingeschat ter hoogte van een aantal geselecteerde slagschaduwgevoelige receptoren in de omgeving van de geplande windturbine van Luminus.

Voor **het project** (KLZ-WT23*)* kan besloten worden dat de VLAREM II jaarnormen voor geen enkele receptor overschreden wordt. Dit betekent dat geen enkel slagschaduwgevoelig object meer slagschaduwuren zal ontvangen dan voorschreven en dat zonder toepassing van milderende maatregelen. De VLAREM II dagnorm daarentegen vergt wel de toepassing van milderende maatregelen, aangezien die ter hoogte van sommige beschouwde receptoren niet gerespecteerd wordt. De overschrijdingen van de norm situeert zich vooral ter hoogte van de receptoren van gebouwen in industriegebied ten noorden van het project.

De windturbines in **referentiesituatie A en B** zorgen echter reeds voor slagschaduw en, indien er geen milderende maatregelen zouden worden toegepast, zelfs voor een overschrijding van de jaar- en/of dagnorm ter hoogte van een aantal beschouwde receptoren.

Ook in de **geplande situatie 1A en 1B** wordt bijgevolg verwacht dat, indien er geen milderende maatregelen zouden worden toegepast, de jaarlimiet voor het aantal uren verwachte slagschaduw en/of de dagnorm van maximaal 30 minuten verwachte slagschaduw per dag overschreden kunnen worden ter hoogte van een deel van de beschouwde representatieve receptoren.

Tenslotte, in de **geplande situatie 2A en 2B** wordt ook verwacht dat er zonder milderende maatregelen de jaarnorm en de dagnorm in de receptoren overschreden wordt.

De toepasselijke VLAREM II-normen ter hoogte van alle receptoren zullen te echter allen tijde gerespecteerd worden door toepassing van een automatische stilstandsmodule. Hierdoor blijft eventuele hinder door slagschaduw beperkt tot een aanvaardbaar niveau.

Luminus verbindt er zich derhalve toe de geplande windturbine uit te rusten met een automatische stilstandsmodule, zoals ook wordt vereist overeenkomstig de bepalingen van VLAREM II. **Hierdoor kunnen de toepasselijke jaarnormen en dagnormen uit VLAREM II ter hoogte van alle receptoren te allen tijde gerespecteerd worden.**

Annex A: Automatische stilstandsmodule

Automatische stilstandsmodule

Doelstelling

Via een automatisch controlesysteem dat aanwezig is op de geplande windturbines, kan gegarandeerd worden dat de VLAREM-norm van 8 u/jaar (of 30 u/jaar) en 30 min/dag wordt gerespecteerd.

De initiatiefnemer verbindt zich ertoe om voor de relevante gebouwen, gelegen binnen de 4h-contour van de geplande windturbines, de nodige mitigerende maatregelen te nemen opdat het aantal uren effectieve slagschaduw de VLAREM-norm niet zal overschrijden. De situatie wordt steeds cumulatief bekeken waardoor voor elke woning in de omgeving voldaan kan worden aan de van toepassing zijnde VLAREM-normen.

De omgeving zal bijgevolg geen extra hinder ondervinden dan de van toepassing zijnde norm.

Beschrijving automatisch management systeem voor slagschaduw (NorthTec systeem)

Input

Zowel de eventueel bestaande als de geplande windturbines worden opgeladen in het systeem op basis van GPS-posities.

Conform de VLAREM-regelgeving worden alle relevante slagschaduwgevoelige objecten gelegen binnen de 4u-slagschaduwcontour gedefinieerd en geprogrammeerd in het systeem. Elk slagschaduwgevoelig object wordt in detail gedefinieerd op basis van de oriëntatie en afmetingen van de ramen.

De reden waarom in de VLAREM-normering wordt vertrokken van de 4u-slagschaduwcontour voor het bepalen van de slagschaduwgevoelige objecten (en niet de 8u-slagschaduwcontour) en de bepaling of er al dan niet een stilstandsmodule dient aanwezig te zijn op de windturbines, is op aangeven van de weerstatistieken.

Werking

Het systeem controleert continu, op basis van datum en tijd, welk slagschaduwgevoelig object op dat ogenblik slagschaduw kan ondervinden en door welke windturbine(s) deze kan worden veroorzaakt.

Dit gebeurt in detail als volgt:

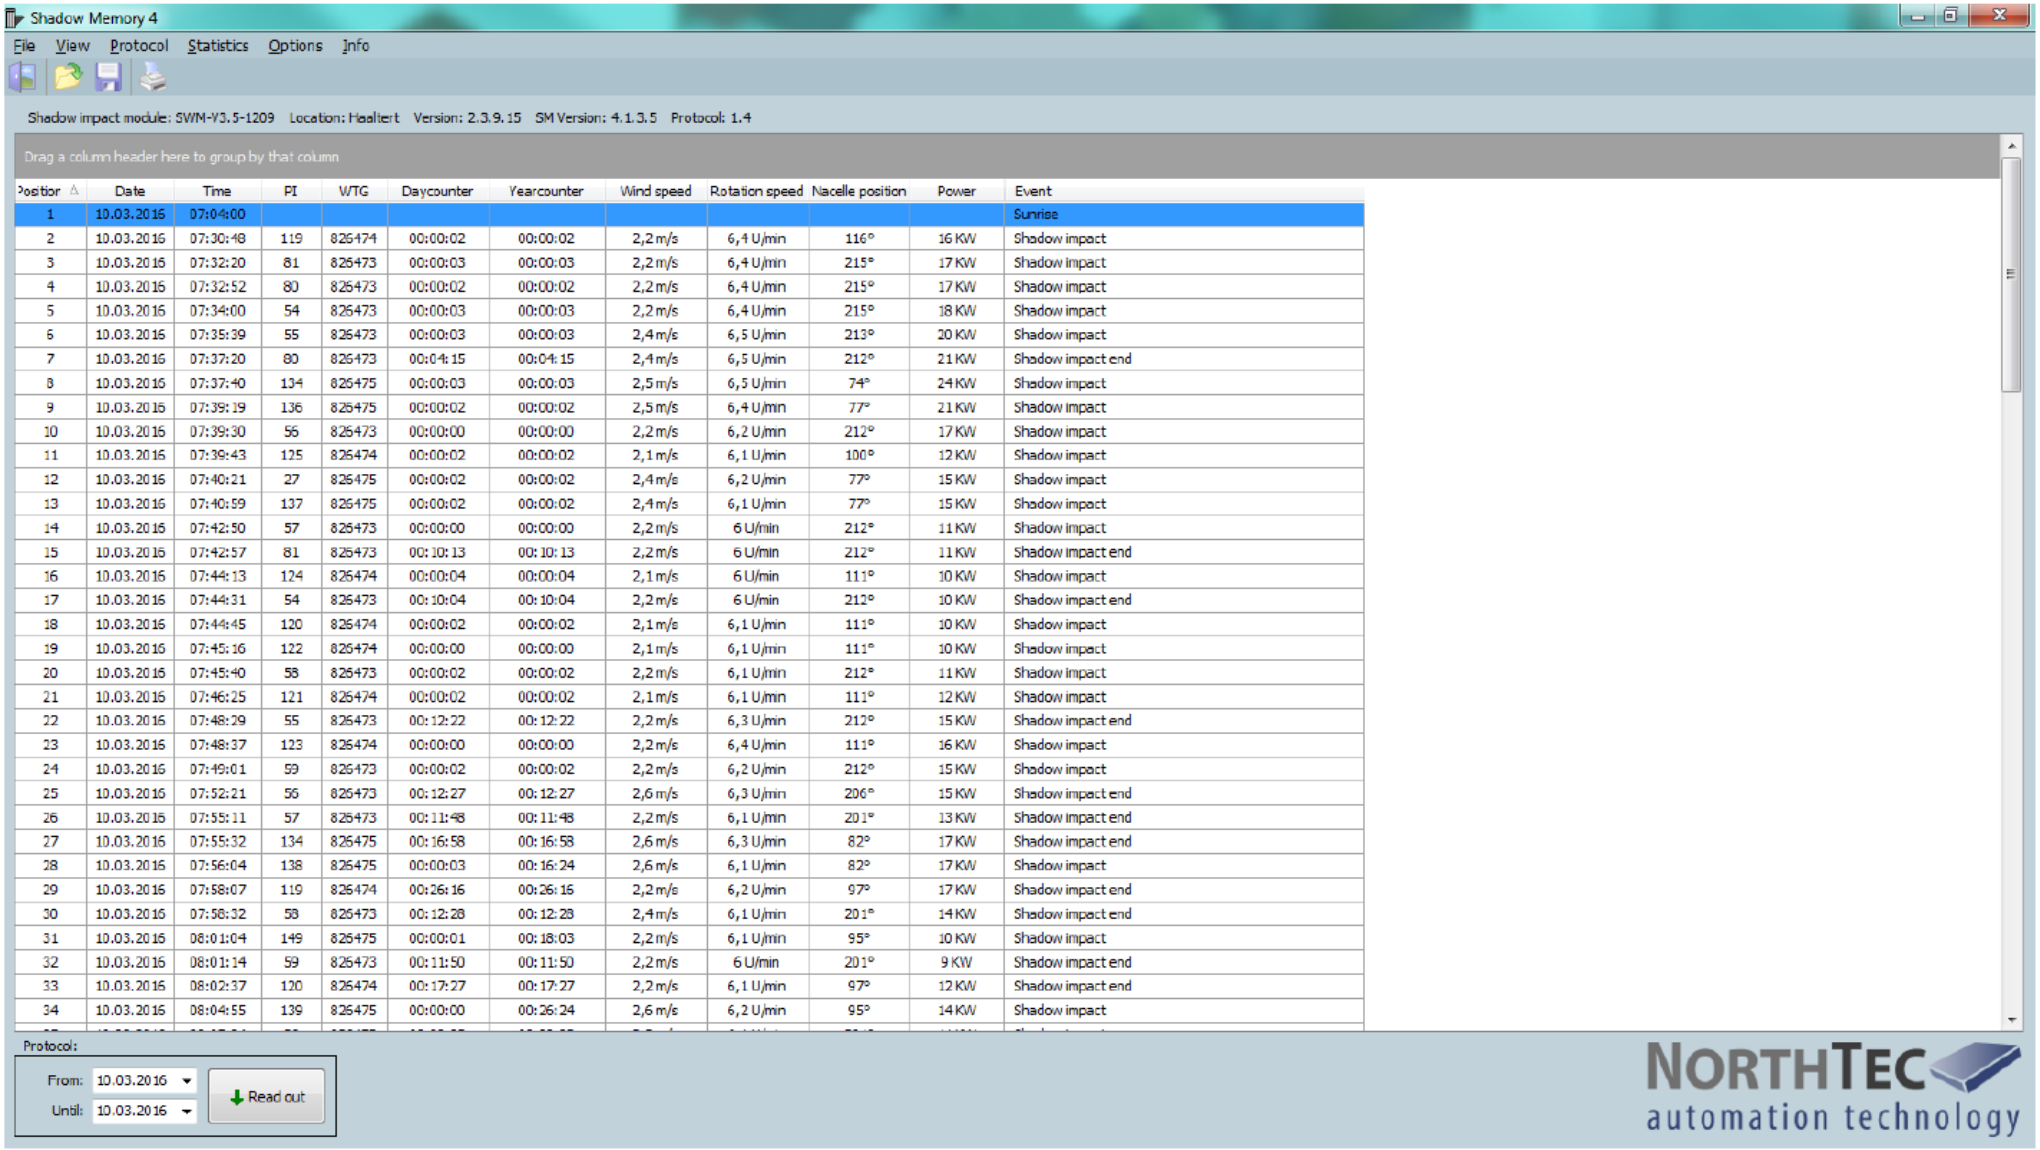
- Aan de hand van vier verticaal opgestelde lichtsensoren, die telkens op een andere zijde van een kubus geplaatst worden, wordt continu het verschil in lichtintensiteit berekend voor die sensoren. Indien er direct zonlicht is, zal er ook schaduw zijn op minstens één van de sensoren. Op basis van het verschil in lichtintensiteit tussen de sensoren wordt bepaald of er al dan niet direct zonlicht, en dus kans op slagschaduw is.
- Het automatisch controlesysteem bepaalt op basis van de werkelijke stand van de zon welke gedefinieerde slagschaduwgevoelige objecten door de rotor van de windturbine(s) slagschaduw kunnen ontvangen.

Indien er reeds bestaande windturbines aanwezig zijn in de omgeving, zullen deze in het systeem geprogrammeerd worden als steeds draaiende op momenten dat er slagschaduw kan optreden zoals hiervoor beschreven. De hoeveelheid slagschaduw die door deze bestaande windturbines op de gedefinieerde slagschaduwgevoelige objecten wordt geworpen, wordt door het systeem bepaald en dit voor alle gedefinieerde slagschaduwgevoelige objecten gelegen binnen de 4u-contour.

Het controlesysteem van de geplande windturbines houdt hiermee rekening bij de bepaling van de hoeveelheid slagschaduw die deze geplande windturbines nog bijkomend op een slagschaduwgevoelig object mogen geven, zonder de norm te overschrijden. Vooraf wordt aan de hand van de slagschaduwkalenders van de bestaande en vergunde windturbines nagegaan tijdens welke periode van het jaar de slagschaduw van deze bestaande windturbines zal optreden waardoor er kan bepaald waar de geplande windturbines dienen rekening mee te houden.

Het managementsysteem kan bij dergelijke situaties ingesteld worden met een ‘preload’ van aantal uren slagschaduw. Per slagschaduwgevoelig object wordt een niet te overschrijden norm ingesteld in het systeem. Deze voorafgaandelijke programmatie laat een optimale werking toe.

Een voorbeeld van een slagschaduwmanagementsysteem is het NorthTec systeem. Dit is een geavanceerd en betrouwbaar slagschaduwmanagementsysteem dat reeds in vele windenergieprojecten in België wordt toegepast. Dit systeem biedt garantie voor het respecteren van de VLAREM-slagschaduwnormen en maakt bovendien rapportering mogelijk.



Het opleggen van een voorwaarde in de vergunning voor het implementeren van een slagschaduwmanagementsysteem waarbij rekening gehouden wordt met de nabijgelegen bestaande windturbines, zorgt voor de nodige garantie ten aanzien van het naleven van de normen.

Conclusie

Op basis van dit automatisch managementsysteem voor slagschaduw garandeert de initiatiefnemer dat de slagschaduweffecten zullen worden gemonitord en op basis hiervan mitigatie zal worden toegepast op de geplande windturbines om te voldoen aan de VLAREM-slagschaduwnormen.

Rapportering

De opvolging van de naleving van de geldende normen kan conform de sectorale VLAREM-normen gebeuren door de toezichthoudende instanties. Het gevraagde logboek zoals opgenomen in de sectorale VLAREM-voorwaarden kan uitgelezen worden uit dit automatische slagschaduwmanagementsysteem. Reeds bij vele bestaande windparken wordt dit op vandaag gebruikt en goedgekeurd door de toezichthoudende instanties. In de afbeelding hieronder volgt een voorbeeld van uitlezing (PI staat voor Point of Immission (of dus slagschaduwgevoelig object)).

SHADOW - Main Result

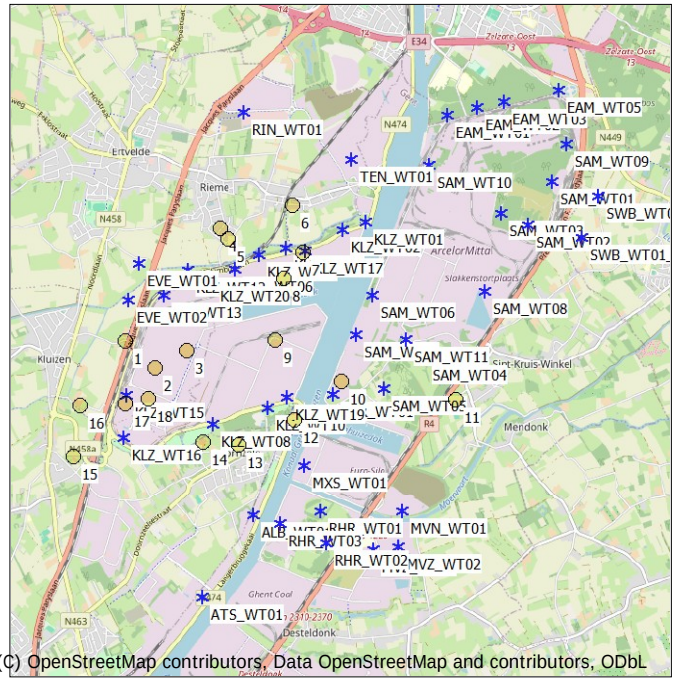
Calculation: Slagschaduw Windpark Stukwerkers - Ref A

Assumptions for shadow calculations

Maximum distance for influence	No limit
Minimum sun height over horizon for influence	3 °
Day step for calculation	1 days
Time step for calculation	1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2,10	3,00	4,50	6,40	7,10	7,30	7,20	6,80	5,50	3,90	2,40	1,80



Operational hours are calculated from WTGs in calculation and wind distribution:
Windklimaat Kluizendok KNMI-KNW 1999-2018

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
510	543	598	498	371	354	711	1.313	1.566	876	635	560	8.534

Monthly aggregation of real case reduction
Idle start wind speed: Cut in wind speed from power curve
A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:
DHM: Height Contours: CONTOURLINE_ONLINEDATA_0.wpo (2)
Receptor grid resolution: 1,0 m

All coordinates are in
Belgian Lambert72-BD72 (BE 2001 <±1m)

Scale 1:100.000

Existing WTG Shadow receptor

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Oper. time red.	0,97			0,97			0,97			0,97			0,97			0,97		
Wind dir. red.	0,54			0,54			0,63			0,64			0,67			0,58		
Total reduction	0,13			0,16			0,23			0,29			0,30			0,25		
Total, real	39			1			32			16			226			286		

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Total, real		221			111			41				44		

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

	21:35	20:35		17:23		16:47
Potential sun hours	498	452	380	333	269	248
Sum of minutes with flicker	27	29	441	962	138	447

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	978	1031	0	1445	3231	2752

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	498	451	380	333	269	248
Sum of minutes with flicker	2904	2865	16	369	1634	26

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	716	435	1668	399	349	1006

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	375	838	434	116	560	219

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

	21:38	20:40	19:30	17:26	16:43	16:45
30	06:06	06:54	07:43	07:33	08:24	08:49
	21:37	20:37	19:27	17:24	16:43	16:46
31	06:07	06:55		07:35		08:49
	21:35	20:35		17:23		16:47
Potential sun hours	498	452	380	333	269	248
Sum of minutes with flicker	178	23	33	77	0	0

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

SHADOW - Main Result

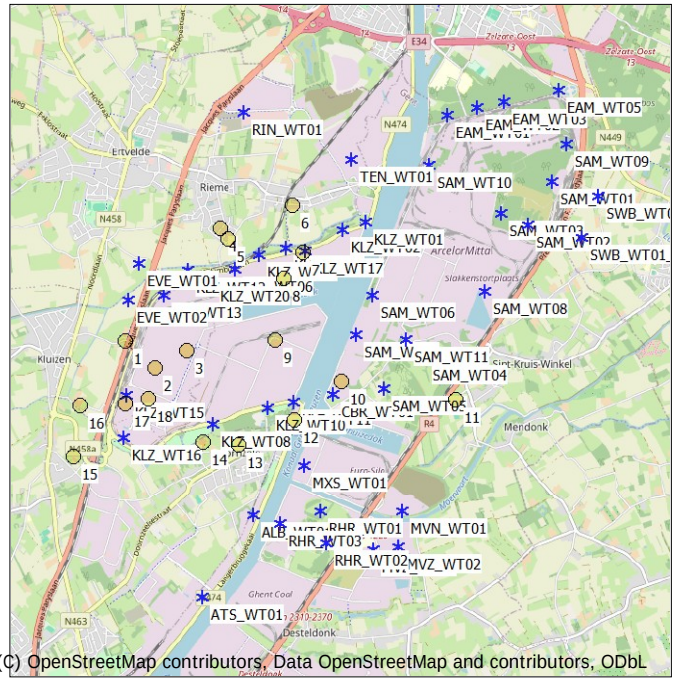
Calculation: Slagschaduw Windpark Stukwerkers - Ref B

Assumptions for shadow calculations

Maximum distance for influence	No limit
Minimum sun height over horizon for influence	3 °
Day step for calculation	1 days
Time step for calculation	1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2,10	3,00	4,50	6,40	7,10	7,30	7,20	6,80	5,50	3,90	2,40	1,80



Operational hours are calculated from WTGs in calculation and wind distribution:
Windklimaat Kluizendok KNMI-KNW 1999-2018

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
511	543	598	498	371	354	711	1.314	1.567	876	636	560	8.538

Monthly aggregation of real case reduction
Idle start wind speed: Cut in wind speed from power curve
A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:
DHM: Height Contours: CONTOURLINE_ONLINEDATA_0.wpo (2)
Receptor grid resolution: 1,0 m

All coordinates are in
Belgian Lambert72-BD72 (BE 2001 <±1m)

(C) OpenStreetMap contributors, Data OpenStreetMap and contributors, ODbL

Scale 1:100.000

Existing WTG Shadow receptor

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Wind dir. red.		0,68			0,67				0,55				0,53	
Total reduction		0,30			0,31				0,20				0,12	
Total, real		272			107				7				29	

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	561	786	3991	3958	1189	791

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	498	451	380	333	269	248
Sum of minutes with flicker	643	3089	4419	1939	859	4

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	936	0	167	271	152	219

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	498	452	380	333	269	248
Sum of minutes with flicker	4	109	78	41	422	658

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	1672	616	41	245	985	427

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	375	838	434	116	560	219

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

Sum of minutes with flicker	406	5	186	178	357	21

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

SHADOW - Main Result

Calculation: Slagschaduw - Windpark Stukwerkers - Project

Assumptions for shadow calculations

Maximum distance for influence	No limit
Minimum sun height over horizon for influence	3 °
Day step for calculation	1 days
Time step for calculation	1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2,10	3,00	4,50	6,40	7,10	7,30	7,20	6,80	5,50	3,90	2,40	1,80

Operational hours are calculated from WTGs in calculation and wind distribution:
Windklimaat Kluizendok KNMI-KNW 1999-2018

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
518	548	605	506	380	360	719	1.332	1.587	899	649	570	8.672

Monthly aggregation of real case reduction
Idle start wind speed: Cut in wind speed from power curve
A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:
DHM: Height Contours: CONTOURLINE_ONLINEDATA_0.wpo (2)
Receptor grid resolution: 1,0 m

All coordinates are in
Belgian Lambert72-BD72 (BE 2001 <±1m)

Total amount of flickering on the shadow receptors caused by each WTG

No.	Name	Worst case [h/year]	Expected [h/year]
KLZ_WT23	KLZ_WT23 Stukwerkers	243:26	45:41

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Potential sun hours	498		452		380		333			269			248		
Total, worst case								581			1969			1518	
Sun reduction								0,36			0,27			0,23	
Oper. time red.								0,99			0,99			0,99	
Wind dir. red.								0,60			0,60			0,60	
Total reduction								0,22			0,16			0,13	
Total, real								125			313			203	

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

	17:33		20:15		21:49 06:05-06:16/11	
Potential sun hours	262	279	367	415	482	495
Sum of minutes with flicker	3137	1228	0	462	1167	160

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker
	Sun set (hh:mm)	First time (hh:mm) with flicker-Last time (hh:mm) with flicker/Minutes with flicker

SHADOW - Main Result

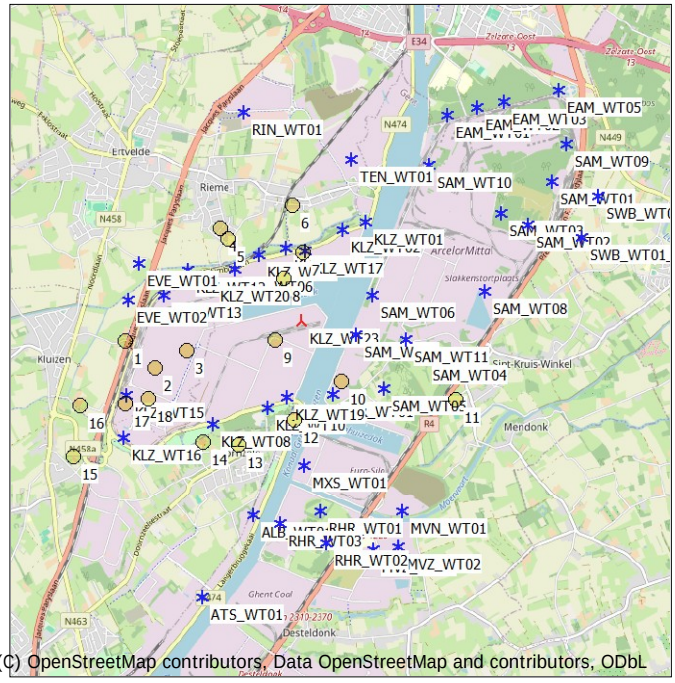
Calculation: Slagschaduw Windpark Stukwerkers - Project + Ref A

Assumptions for shadow calculations

Maximum distance for influence	No limit
Minimum sun height over horizon for influence	3 °
Day step for calculation	1 days
Time step for calculation	1 minutes

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2,10	3,00	4,50	6,40	7,10	7,30	7,20	6,80	5,50	3,90	2,40	1,80



Operational hours are calculated from WTGs in calculation and wind distribution:
Windklimaat Kluizendok KNMI-KNW 1999-2018

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
511	543	598	498	371	354	711	1.313	1.567	876	636	560	8.537

Monthly aggregation of real case reduction
Idle start wind speed: Cut in wind speed from power curve
A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:
DHM: Height Contours: CONTOURLINE_ONLINEDATA_0.wpo (2)
Receptor grid resolution: 1,0 m

All coordinates are in
Belgian Lambert72-BD72 (BE 2001 <±1m)

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Total reduction		0,13			0,16			0,21			0,29			0,31			0,31	
Total, real		16			14			25			52			17			100	

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm)		First time (hh:mm) with flicker	(WTG causing flicker first time)
	Sun set (hh:mm)	Minutes with flicker	Last time (hh:mm) with flicker	(WTG causing flicker last time)

Table layout: For each day in each month the following matrix apply

Day in month	Sun rise (hh:mm) Sun set (hh:mm)	Minutes with flicker	First time (hh:mm) with flicker Last time (hh:mm) with flicker	(WTG causing flicker first time) (WTG causing flicker last time)
